## New Gasket Position for REDEL 2P Water-Resistant Plug Models

### Summary:

The gasket position for the water resistant (IP66) plug models is changing due to internal improvements to LEMO's high quality processes and procedures. Models affected are CFB, CFC, CFH and CFE in the REDEL 2P Series.

### Details:

The gasket position is changing as per the attached sketch. The dimensions of the collet nut and collet have also changed.

The parent level part numbers will remain the same, although the affected inner component part numbers will change. The older version product will remain available upon request.

This new version will be available after September 2017.
