

Compact fans for AC, DC and EC

Product Catalog 2022-11

ebmpapst

engineering a better life

Trendsetter in fan technology

Uncompromising quality made by ebm-papst

Among the best.

Trendsetting with innovative technologies. Listening to customers' needs. Developing new ideas to meet requirements and realizing them with pioneering spirit. This philosophy has made ebm-papst the leading technology pioneer in the world of fans.

A brand in that decades of application expertise gained from large volume fan production and because we are in a position to produce highly efficient quality products. Our intelligent solutions for electronics cooling make sure that you are always one step ahead of the competition thanks to innovative, reliable, top-quality technology. Of course they are readily available at fair market prices.

And if required, tailor-made right down to the last detail. In other words, if you need fans that do not yet actually exist, contact us. **We at ebm-papst call that: *Engineering a better life.***

ebmpapst

engineering a better life

What *Engineering a better life* means to us.

Who we are.

With over 20,000 different products, ebm-papst offers the right solution for just about any challenge. As the logical next stage in the development of our highly-efficient GreenTech EC technology, we believe that industrial digitization offers the greatest future prospects for our customers. With GreenIntelligence, we already represent intelligently interconnected complete solutions that are unrivaled worldwide.

Because we are always committed to making each of our innovative hardware and software solutions more powerful, compact, efficient and sustainable than its predecessor, we have evolved over the years into the global technology leader for ventilation and drive technology.

What drives us.

But our consistent pursuit of efficiency and progress has even deeper roots. After all, there is something that excites us even more than our market position. It is the deep awareness that, with our solutions, we are making the lives of many people around the globe more pleasant, safer and thus better. Therefore, the central driving force in all our thoughts and actions is Engineering a better life. It is the reason why it is worthwhile for us to get up every day and do our best. More about this under ebmpapst.com/betterlife

What you get out of it.

Collaborating with us brings you tangible benefits, such as a clear competitive edge in IoT and digital networking, sustainable product solutions that allow you to fulfil the latest environmental guidelines, and perfect system solutions from one source, shaped by uncompromising quality management in every step of the process. At ebm-papst, over 800 engineers and technicians develop the solution that perfectly fits your requirements. Tell us what we can do for you! One of our numerous sales sites around the world is sure to be near to you.

Types of fans and their function

Axial fans: High air flow with medium to relatively high pressure increase

The air flow in axial fans with an impeller that is similar to a propeller is conducted largely parallel to the axis of rotation, in other words in the axial direction. Axial fans with free air delivery at zero static pressure have the lowest power input that rises with increasing back pressure. Axial fans for cooling of electronic equipment are mostly equipped with external housing. The electric motor is integrated in the fan hub. This compact design allows space-saving accommodation of all devices. The flange is equipped with mounting holes.

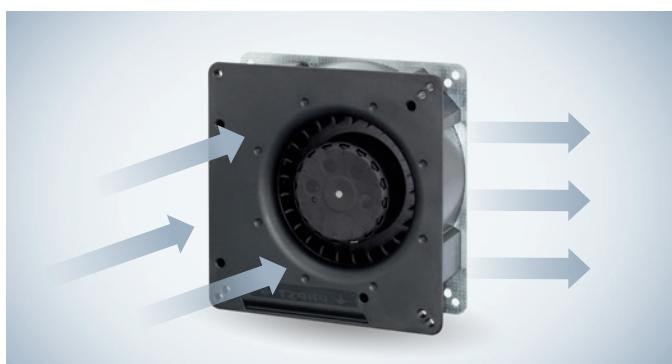

Diagonal fans: High air flow at relatively high pressure increase

At first glance diagonal fans only differ slightly from axial fans. Intake is axial, whereas exhaust is diagonal. Due to the conical shape of the wheel and housing, the air is pressurized more in the diagonal fan. In direct comparison with axial fans of the same size and comparable performance, these fans are distinguished by the lower operating noise at high pressures.

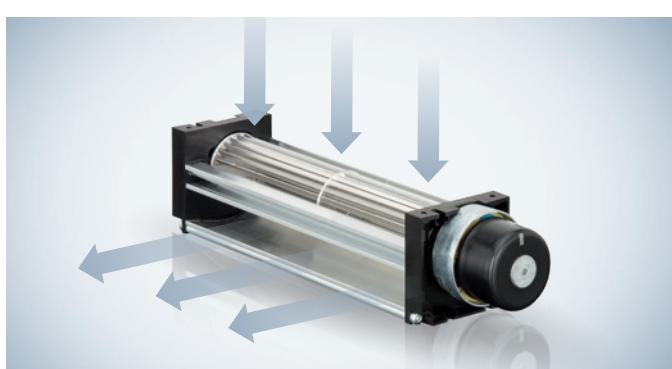

Centrifugal fans: High pressure increase at limited flow rate

Generally, many cooling tasks can be performed excellently by axial and/or diagonal fans. But if the cooling airflow has to be deflected at an angle of 90°, for example, or if even greater pressure increase is necessary, centrifugal fans are more effective. For your application, ebm-papst offers not only complete centrifugal fans, but also motor/impeller combinations without external housing.

Tangential fans: High air flow with low pressure increase

Tangential fans are used especially to produce a wide airflow distribution through devices. The air flows through the roller-shaped impellers twice in the centrifugal direction: in the intake area from the outside to the inside and in the outflow area from the inside to the outside. Whirls form in the roller due to the vanes, which guarantee a steady flow of air through the impeller.

Expertise and technology

Drive know-how

For the past 80 years, all conceivable types and applications of drive engineering have played an essential role at ebm-papst. A commitment that is the foundation for the development of optimum drive solutions regardless of the type of fan and its use. In DC fans, ebm-papst set standards 50 years ago with the introduction of DC fans with electronically commutated external rotor motors. In the changeover from AC fans to EC motors, ebm-papst is again doing pioneering work. EC motors for AC connection are highly efficient and impress with their long service life, higher air flow and significant pressure increase.

Smooth operation

Our aerodynamically optimized design and high mechanical precision produces outstanding noise properties in series production. The "soft" commutation electronics of DC and EC fans produce a very smooth operation. By avoiding steep switching edges when the individual coils are switched, this reduces the structure-borne noise from the motor. Computer-aided measurements and series of analyses performed in a state-of-the-art sound measuring chamber are conducted on each fan model from the very beginning.

Long service life

The bearing system plays a vital role both in the long service life and the smooth operation of device fans. The Sintec compact bearing provides most of the device fans with a proven bearing system. Constant low noise during the entire operating time and considerably lower shock sensitivity are the outstanding features of this bearing technology. In addition, with regard to temperature endurance, Sintec compact bearings can be used without problems in most applications.

Despite the slightly greater noise and shock sensitivity of ball bearings, this bearing technology should be given preference for fans exposed to extreme thermal and adverse application conditions (e.g. extreme environmental conditions, critical installation position, etc.). The service life data provided in this catalog is based on extensive service life tests and mathematically / scientifically proven service life calculations. Our product descriptions are updated continuously with all relevant data obtained from long-term tests.

Aerodynamics

With the aid of state-of-the-art computer programs, we are able to optimize the fan impellers and the inner shape of the housing. Air output and available motor performance are matched exactly to the size of fan. This guarantees the low noise that is typical for ebm-papst, even at high back pressure.

Sturdy construction – in metal or plastic

Fans of all-metal construction: sturdy and resistant. The housing is made of an aluminum alloy. The metal surfaces that are subject to corrosion are permanently protected by an impact- and abrasion-resistant electrophoretic baked enamel. This particular version is very recyclable. Fans with fiberglass-reinforced plastic housing and impeller: Excellent stability and low weight distinguish this highly efficient fan design. Combinations of metal housing and plastic impeller combine the advantages of both types of design.

Product images

The dimensioned drawings and product photos that appear in the catalog are for orientation purposes and may differ in some details from the actual product design.

Product liability

Motors and fans from ebm-papst are components intended for proper installation. The customer bears responsibility for the overall end product.

Brand name PAPST

The PAPST mark is a registered trademark for ebm-papst products and is a synonym for compact fans of the highest quality, functionality and reliability for decades.

Safety is included

It goes without saying that all ebm-papst fans conform to the approval requirements of the VDE (Association of German Electrical Engineers) and the standards and regulations of UL and CSA. All fans conform to the European Standard EN 60335 or EN 60950 plus those of the UL (Underwriters Laboratories) and CSA (Canadian Standards Association). Our DC fans are mostly designed for protection class 3 / protective extra-low voltage. AC fans for protection class 1. ebm-papst fans meet the highest requirements of electrical safety. All design variants feature reverse polarity and locked-rotor protection. We also have a wide selection of suitable fans for industry-specific standards, such as those known from the railroad, refrigeration or housing sectors. You can find more information in our industry-specific catalogs at ebmpapst.com.

Quality in detail

It is the important details that reveal the meaning of the words "made by ebm-papst": Consistent adherence to development and design processes and a goal-oriented commitment to quality along the entire process chain are the foundation for the above-average service life of our fans. 100,000 hours and above are no longer an exception. The no-compromise ebm-papst quality assurance spans over all process levels – from the choice of materials and the use of carefully selected, certified suppliers, from the production of parts up to the final assembly. These details combine to result in reliable fan products with an above-average service life.

ErP Directive

All products with power consumption between 125 W and 500 kW are subject to the European "Energy-related Products Directive" (ErP) for improving energy efficiency, with the first stage applicable from 2013 and the second as of 2015. Thanks to ground-breaking GreenTech EC technology, all of our fans and motors in these performance classes already exceed the ErP Directive today.

Flexibility in every application

– tailor-made for you

Practical applications: fans that are customized and smart

ebm-papst has always developed customer-specific smart fans that meet the exact requirements of the application. In addition to the wide range of standard fan types, we offer specific fans in many sizes, performance classes and designs: with smart motor features, monitoring and control functions as well as special designs for use under extreme conditions. They are all based on the standard type fans that you will find in this catalog. Special fan types for your application can be produced in economical batch sizes. Our expert engineers will assist you in selecting the right configuration.

Innovation at its best:

Smart and customer-specific configurable solutions increase efficiency and cost-effectiveness. For example, temperature-dependent speed profiles are possible with a number of freely selectable interpolation points. External speed settings and a variety of combinable alarm and tachometer functions can also be programmed. The digital motor management achieves high control accuracy. Bus interfaces also offer a much greater possibility of control and monitoring for the digital future.

Higher degree of protection for every type of application

ebm-papst provides, on request, many fan series in versions that meet to the requirements of degree of protection IP 54 and IP 68. Their stator and all electrical components are fully encapsulated. Stainless steel ball bearings can be used for operation in particularly aggressive media and use under extreme environmental conditions, thus providing additional reliability.

Almost anything is possible

Regardless of your cooling and ventilation tasks, we will develop the right solution. And the most economical one. Based on the fans listed in this catalog, more than 4000 different versions are available.

Temperature-controlled fans

Fans with temperature-controlled speed have particularly quiet and efficient cooling characteristics. Thanks to integrated intelligence, they adapt their speed to the current cooling requirements.

Speed setting via interfaces

With a wide range of DC fans with separate control input, ebm-papst provides an alternative to the NTC-controlled types of fans. They are especially suitable for systems and units that already have standard interfaces for varying speed via internal switching and control circuits. The main applications are units that require load-dependent, individual speed profiles or systems with minimum standby cooling requirements and varied speed increase at varying power peaks.

Electronic tachometer

Do you want to be informed about the current fan speed at all times? ebm-papst has fans with an integrated "electronic tachometer". It registers the actual value of the fan speed. Via an integrated sensor, the fan generates speed-dependent signals that can be used directly. Depending on the number of poles of the motor, 2, 3, or 6 pulses per revolution are generated.

Alarm signal for greater safety

If your application requires monitored fan operation, in addition to speed monitoring, ebm-papst also provides a multitude of varying alarm signals. Depending on the type of fan in question, the signal will either be static, already evaluated, or interface-compatible. The alarm signal output provides reliable long-term monitoring and a status signal if critical operating conditions arise.

Product names

AxiACi		AC fan. Energy-saving compact fans with wide voltage range and volume-oriented characteristic curve in various sizes. Can be used universally as a retrofit for existing AC solutions or in new projects with AC power supply. With extensive approval (e.g. DIN EN 60335-2-89) and a broad temperature range.
AxiEco		DC fan. Compact and powerful. Innovative fan impeller design with rotating fan housing maximizes efficiency and reduces noise.
AxiForce		DC fan. Axial compact fan optimized for noise and efficiency with pressure-oriented characteristic curve in different standard sizes.
AxiRev		DC fan. Axial compact fans designed for maximum noise reduction with a volume-oriented characteristic curve and round housing. Reversibility and symmetrical fan impellers enable identical air performance values in both directions of rotation. Designed for decentralized residential ventilation.
AxiTwin		DC fan. Counter-rotating fan with two counter-rotating fan impellers and innovative aluminum flange with integrated guide blades. Exceptionally pressure-oriented. Redundancy is offered by the two fans that rotate independently of one another.
DiaForce		DC fan. New single-stage principle with highly innovative aerodynamic design. Exceptionally pressure-oriented with outstanding noise values.
S-Force		DC fan. Powerful generation of fans in various sizes. Clear focus on pressure-resistant characteristic curve.
S-Panther		DC fan. Powerful generation of fans in various sizes. A significant focus on noise and air flow.

The product names mentioned are registered trademarks of ebm-papst St. Georgen GmbH & Co. KG

Optional special versions

(see chapter DC fans - specials from p. 252)

In the catalog, a text box in the upper right corner provides information on the special designs that are technically possible in the fan series.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations. The special versions are designed for specific customers and projects and are usually not available off the shelf.

Speed signal /2, /12

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 256 and the following.

Go / NoGo alarm /37, /39

The fan uses a separate wire to output a static signal when it is stationary, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 260 and the following.

Alarm with speed limit /17, /19

When one of the speeds defined in the fan electronics is undershot, the fan outputs a static signal providing information that the set speed limit was undershot. For technical details, please refer to page 258 and the following.

External temperature sensor

An NTC resistor (negative temperature coefficient) is attached to the fan via a separate wire and the fan changes its speed depending on the temperature on the NTC. For technical details, please refer to page 262.

Internal temperature sensor

In this case, the NTC is integrated into the fan and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 262.

PWM control input

The speed of the fan can be changed via a pulse-width-modulated signal. This signal is applied to a specially provided wire. For technical details, please refer to page 263.

Possible special designs are depicted on the catalog page.

Analog control input

The speed of the fan can be changed via a control voltage. This control voltage is applied to a specially provided wire. For technical details, please refer to page 263.

Multi-option control input

The fan has a control input that the user can trigger either using a PWM signal, an analog signal, or a variable resistor. For technical details, please refer to page 264.

Bus input

Bus interfaces provide a wide range of monitoring and control of your application. Fans from ebm-papst with bus interface can be easily and conveniently integrated into your system.

Moisture protection

Protection for the fan electronics against moisture and condensation. For technical details, please refer to page 266.

Degree of protection IP54* / IP68*

Protection of motor and circuit board against splashed water and moisture. For technical details, please refer to page 266.

Salt spray protection

ATEX according to DIN EN 60079-7. Protection of fan against the damaging effects of salt spray.

For technical details, please refer to page 266.

Direction of rotation

On many variants, the direction of rotation can be changed via a control input.

* IP= International degree of protection marking; For AC fans max. IP 65 available.

Service life

Service life data from ebm-papst St. Georgen

Our fans catalog gives two different values for the service life of each product:

The first column usually states the service life L_{10} at 40 °C. Exceptions are marked in the column headings.

The second column states the life expectancy L_{10IPC} (40 °C).

Type / Type ref.	Part number	Model	Volt	Current	Operating point	Air flow	Speed	Power	Efficiency	Sound pressure	Sound power	Humidity	Altitude	Temperature	Humidity	Altitude	Temperature	Humidity	Altitude

Technical drawing

Dimensions in mm

Service life L_{10} (40 °C)

All values in the first column are based on in-house service life endurance tests in which our products are operated in several operating positions at 40 °C as well as 70 °C until they fail. A fan is deemed to have failed when it deviates from its defined air flow and speed values, or when the operating noise becomes noticeable. Such tests can take several years before a representative number of failures has been registered. There are still some fans in the process of endurance testing today that came into testing in the early 1980s. These fans are proof of the legendary "made by ebm-papst" reliability.

Test results are presented in a diagram and the service life of the product L_{10} at the temperature tested is determined based on the Weibull distribution. These tests have given us years of experience in the way various design parameters and temperatures can affect the service life of a product. Data for service life at various temperatures for new products can be stated with a very high degree of precision based on tests, product specifications, and commonalities in the design of the product.

Life expectancy L_{10IPC} (40 °C)

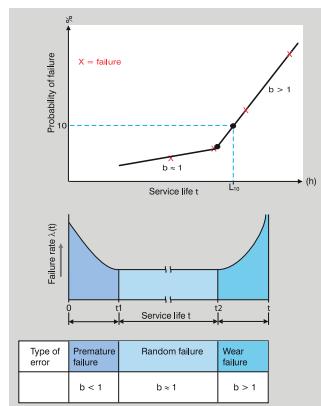

The second service life column states the life expectancy L_{10IPC} . This information is based on the international standard IPC 9591. Again here, the foundations for the service life values are our service life endurance tests at high ambient temperatures. The service life at temperatures below the test temperatures is calculated using fixed factors. This method produces much higher service life values, especially at room temperature (see diagram on right).

Summary:

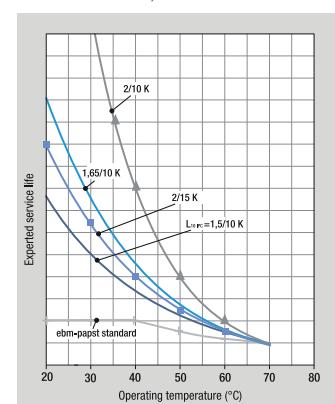

The life span calculations have been carried out to the best of our knowledge and are based on experience gained by ebm-papst. The specified L_{10} (40 °C) and L_{10IPC} (40 °C) values all allow statements to be made about the theoretical calculated service life under certain assumptions. The values determined here are extrapolations from our own service life tests and from statistical variables. In the respective customer applications, there may be different influencing factors that cannot be included in the calculations due to their complexity. The service life information is explicitly not a guarantee of service life, but strictly a theoretical quality figure.

Fans in an endurance test cabinet at ebm-papst St. Georgen.
1500 fans are operated in temperature cabinets until they fail.

Bathtub curve and Weibull distribution.

Example of the influence of factors from various manufacturers on the life expectancy.

Selecting the correct fan

1. Dissipated energy

A large amount of the energy consumed by electrical and electronic devices is converted to heat. So when selecting the correct fan, it is important to determine the dissipated energy that must be removed. The electrical power consumption of the unit to be cooled often represents a suitable value for this purpose.

2. Admissible temperature increase

The air flow that the selected fan is required to generate, is determined by the dissipated energy and the admissible heating (ΔT) of the cooling airflow (from entry to exit of the device to be cooled). The maximum admissible ΔT depends greatly on the temperature sensitivity of the individual parts of the device.

For example, $\Delta T = 5\text{K}$ means that the average cooling airflow leaving the device to be cooled may be only 5°C warmer than the ambient temperature. This requires a lot of air. A lower air flow rate is sufficient if a higher temperature difference (e.g. $\Delta T = 20\text{K}$), can be tolerated.

3. Required cooling airflow

- In the diagram below, a horizontal line is drawn from the dissipated energy to intersect with the selected ΔT line.
- Read down from this point to obtain the required value for the cooling airflow. The diagram is based on the following formula:

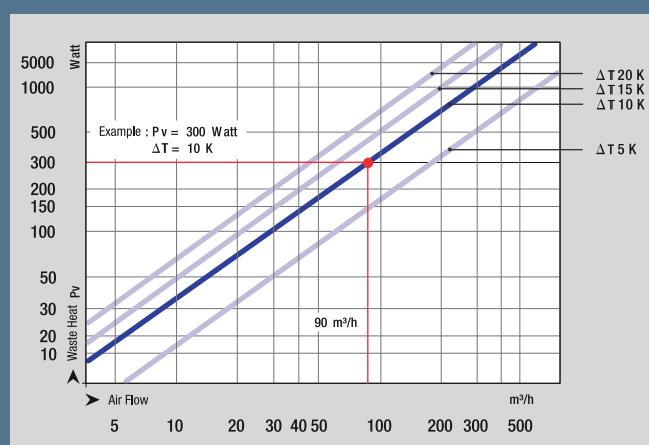

$$q_v = \frac{P_v}{C_{PL} \cdot \rho_L \cdot \Delta T}$$

4. Fan selection

But the fan you are looking for must also be able to deliver a suitable static pressure increase Δp_f , in order to force the cooling air through the device. So a fan must be selected that provides the required air flow performance within its operating range (see also the air performance curves under technical data).

5. Fan selection with multiple alternatives

If more than one fan meets your requirements, the sound level, power consumption, space requirements, economy, and ambient conditions will assist in making the final choice.

Definitions

P_v = amount of heat to be dissipated in [W]

C_{PL} = specific heat capacity of air in [J/kg/K]

$C_{PL} = 1010 [\text{J/kg/K}] = 0.28 [\text{Wh/kg/K}]$

ρ_L = air density in [kg/m^3]

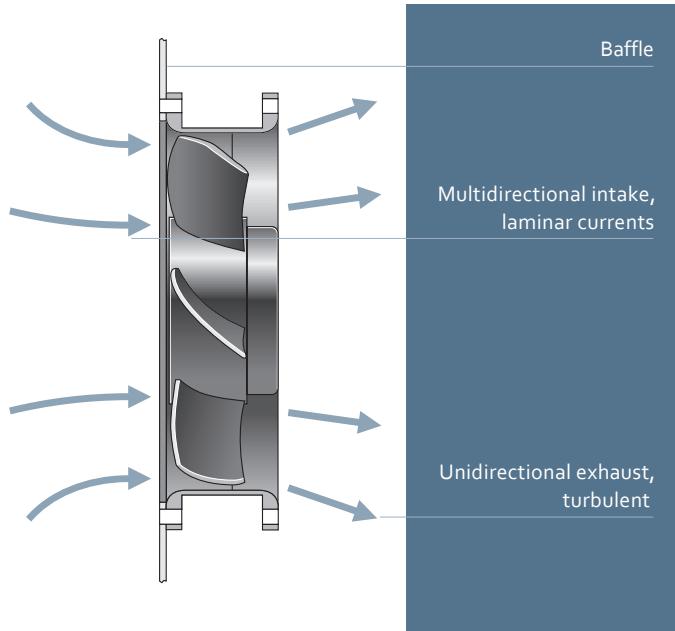

$\rho_L = 1.2 \text{ kg/m}^3$

$\Delta T = T_1 - T_2$ temperature difference in [K] between inlet and outlet

Fan installation

Intake or exhaust side installation

Under ideal conditions, the operating point is represented as the intersection between the fan and loss curves, regardless of whether the fan is positioned at the air intake or exhaust side of the device. In addition to ensuring the required flow rate, several other aspects must be considered for determining an appropriate fan concept. The intake air currents of a fan are mainly laminar, comprising nearly the entire suction area. By contrast, the exhaust air of a fan is generally turbulent and flows in a preferred direction, such as axial for an axial fan. The turbulence of the exhaust intensifies the heat transfer from components within the air currents, so that installing the fan on the air intake side of the device is recommended for cooling and heating. Installing the fan at the device intake is also advantageous because the fan will not be subjected to the dissipated heat of the device. Therefore, it operates at low ambient temperatures and has a greater life expectancy.

Information on installation

When a fan is operated for the first time in an application, the user may have noticed that the air flow in the device was lower than expected. What is the reason for this?

- The values stated in this catalog were determined under optimum, constant, and comparable measurement conditions.
- Due to manufacturing tolerances, both the speed of the drive motor and the geometric shape of the fan impeller are usually not exactly the nominal values but within defined tolerance ranges.
- Ideal installation conditions under which free air intake and exhaust are present are seldom feasible in practice. Quite frequently, the fans have to be installed in close proximity to other components or cabinet panels. As a consequence, the intake and exhaust currents may be restricted, causing the air flow to diminish and the sound level to increase. Fans are particularly sensitive to obstructions that are positioned directly in front of the output cross section, and they often cause an increase in tonal noise.

Our advice: The distance between the fan and adjacent components should be at least equal to the installation depth of the fan.

Accident prevention

The turning rotor and the high speeds that are sometimes involved mean that our fan products carry an inherent risk of injury. They may only be operated after correct installation and with suitable protective equipment (e.g. with a finger guard). More information can be found in the Internet at: www.ebmpapst.com/safety

Definitions

nominal voltage [volts]

The voltage at which the nominal values (the table values listed in this catalog) were determined. The fan operation for DC fans is not limited to the nominal voltage. Fan speed and fan performance can vary according to the admissible voltage range that is specified on the nameplate of each fan. Please note that this is not a pulsed or modulated DC voltage.

Frequency [Hz]

ebm-papst AC fans are made for operating frequencies of 50 Hz or 60 Hz. Their technical data changes accordingly.

Air flow [m³/h, cfm]

The air performance of the fan in free air operation, i.e. the fan blows into the free space without static pressure increase.

Fan curves

The fan curves are determined in accordance with DIN ISO 5801 specifications on a dualchamber test stand with intake side measurement. This measurement technique closely approximates the operating conditions experienced in typical applications for fans and yields realistic performance curves. The curves apply to an air density of $\rho = 1.2 \text{ kg/m}^3$ corresponding to an air pressure of 1013 mbar at 20 °C.

Variations in air density affect pressure generation, but not the flow rate. The pressure generated at other air densities can be estimated with the formula $\Delta p_2 = \Delta p_1 (\rho_2 / \rho_1)$. The nominal speed values, air flow and power consumption listed in the table were measured in free air operation with horizontal shaft at an ambient temperature of 20 °C - 25 °C, air density $\rho = 1.2 \text{ kg/m}^3$ after a warmup period of 5 min.

Noise [dB(A), Bel(A)]

1. Sound pressure level – dB(A)

Noise ratings of the fan in free air operation, i.e. at maximum flow rate.

2. Sound power level 1 Bel(A) = 10 dB(A)

Extent of the overall sound radiation of the fan. The sound power level is determined in the optimum operating point, that means, where the fan operates optimally in terms of efficiency and noise.

Power consumption [watts]

Input performance of the fan motor when operating free blowing at nominal voltage. Depending on the operating condition in the application, the power consumption may be significantly higher.

Temperature range [°C]

The admissible ambient temperature range within which the fan can be expected to run continuously.

Service life [h]

Lebensdauer L₁₀ bei 40 °C

Standard figures for service life at ebm-papst. These two temperatures are based on intensive, in-house endurance tests and on experience from more than 80 years developing fans.

Life expectancy L_{10IPC} (40 °C)

Information calculated in line with the standard IPC 9591. Data based on the internal life expectancy at 70 °C, more optimistically extrapolated to 40 °C.

We expressly state that none of the information or data in this catalog is to be construed as a guarantee or warranty of properties.

Unit conversion:

Air flow	Pressure
1 cfm = 1.7 m ³ /h	1 Pa = 1x10 ⁻⁵ bar
1 l/s = 3.6 m ³ /h	1 inch H ₂ O = 249 Pa
1 l/min = 0.06 m ³ /h	1 mm H ₂ O = 9.81 Pa

Subject to technical changes.

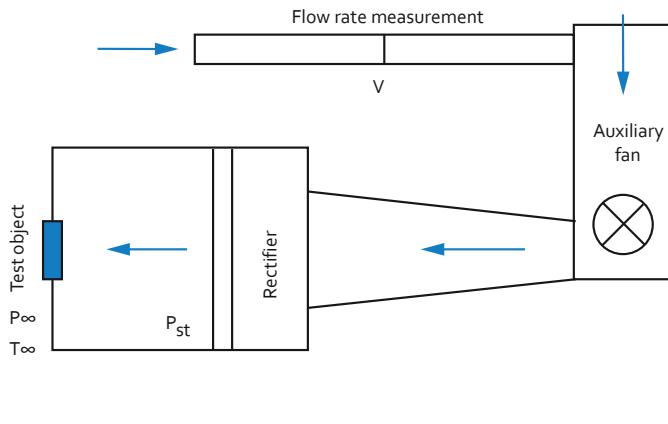

We do not support aerospace applications with our products. German and international patents (registered designs and utility models).

ebm-papst is a registered trademark of ebm-papst Mulfingen GmbH & Co. KG.

Standard test equipment to determine the fan characteristics

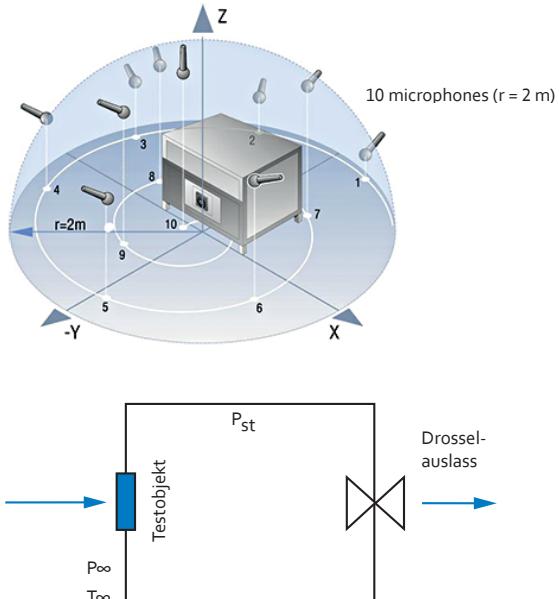

Pressure/air flow

Blow-down test facility acc. to ISO 5801

Sound power level pressure/air flow:

Outlet side regulated test rig in semi-anechoic chamber according to ISO 10302

Sound pressure and sound power level

All acoustic values are determined in accordance with ISO 13347, DIN 45635 and ISO 3744/3745 as per accuracy class 2 and given in A-rated form.

For measurement of the sound pressure level L_p the microphone is located on the intake side of the fan being tested, generally at a distance of 1 m on the fan axis.

For measurement of the sound power level L_w 10 microphones are distributed over an enveloping surface on the intake side of the fan being tested (see graphic). The measured sound power level can be roughly calculated from the sound pressure level by adding 7 dB.

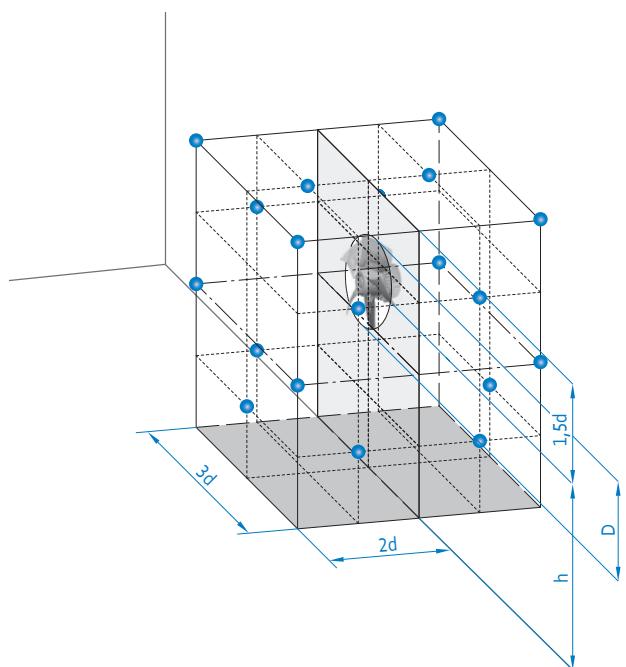

Measurement set-up according to ISO 13347-3 and DIN 45635-38:

- measuring points

$d \geq D$

$h = 1.25m$

Measurement area $S = 6d^2 + 7d(h + 1,5d)$

Product overview

DC axial fans

Our DC product portfolio offers a wide range of different sizes and performance classes suitable for the requirements of your individual application.

All fan types are equipped with efficient, brushless motor technology, electronically commutated drive and electronic reverse polarity protection. They impress with a long service life and outstanding efficiency.

This reduces the thermal load, thus ensuring maximum efficiency and a long service life.

All fan types are designed in IP20 as standard. IP54/IP68 solutions and special protection types are available on request.

GreenIntelligence enables the fan speed to be intelligently controlled and noise-optimized, efficient and tailored use to be monitored.

VWCA025A...

DC axial fan · max. $4.7 \text{ m}^3/\text{h}$ · □ 25 x 8 mm

from page 14	Definitions
from page 350	Accessories
more at	www.ebmpapst.com

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

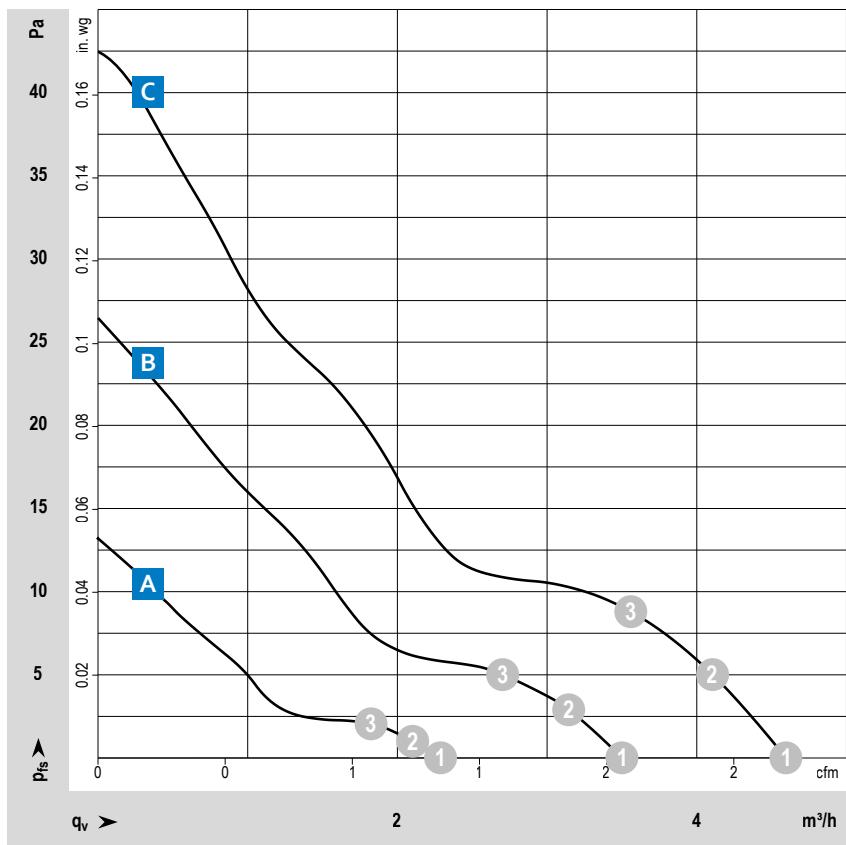

- Version: DC fan available in 5 or 12VDC; compact, small and lightweight; noise and efficiency optimized axial fan
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 28
- Electrical protection class: III
- Weight: 5 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Speed signal
- Moisture protection

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

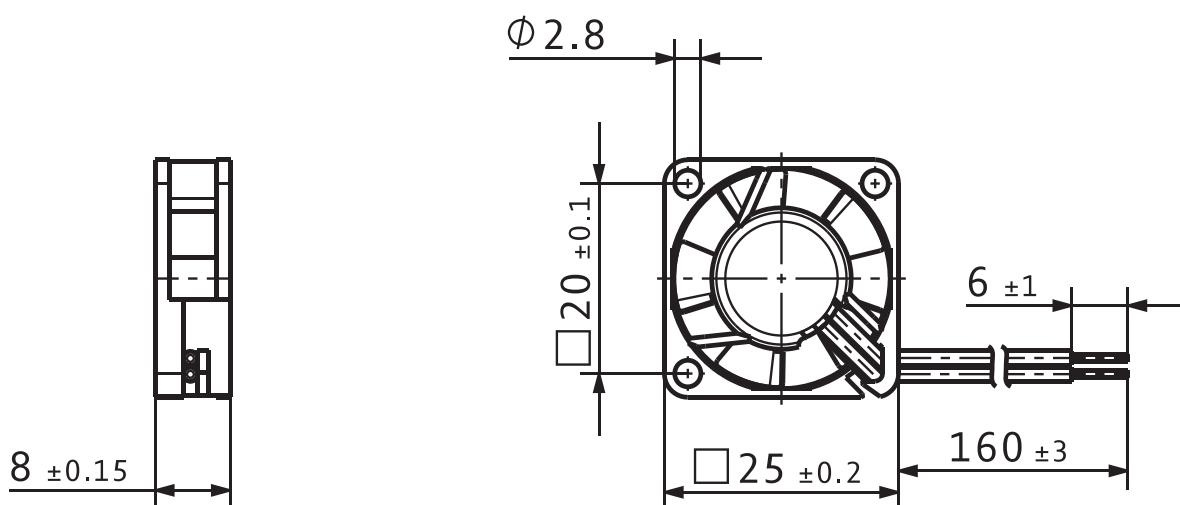

Noise: Total sound power level $L_{w,A}$ ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level $L_{p,A}$ measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48VDC; compact, small and lightweight; noise and efficiency optimized axial fan with rather rigid characteristic curve
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 28
- Electrical protection class: III
- Weight: 45 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm - alarm with speed limit
- External temperature sensor
- PWM control input - analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Special features

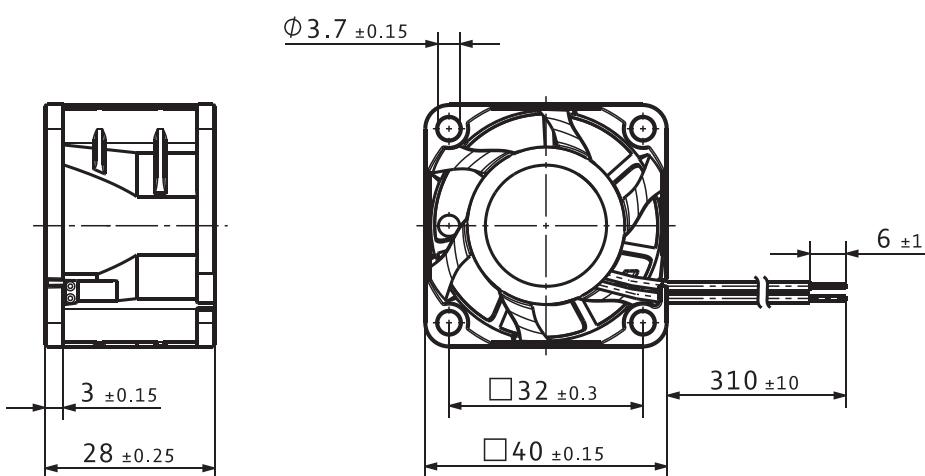

- Additional fan types with protection class IP68, -40 °C, Speed signal, PWM control input and EMC limit values, class B

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fans available in 12 or 24VDC; compact, small and lightweight; low-profile, noise and efficiency optimized axial fan
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 28
- Electrical protection class: III
- Weight: 25 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Speed signal
- Go / NoGo alarm
- PWM control input
- Moisture protection

Special features

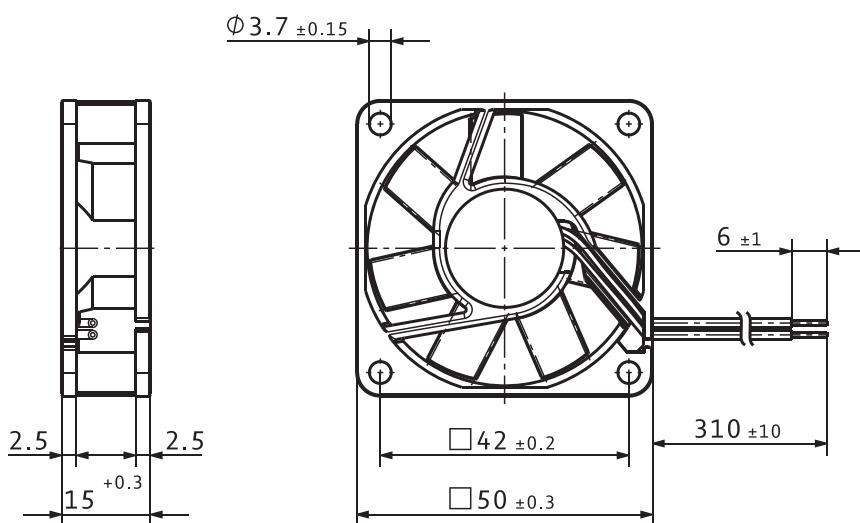

- Additional fan types with extended temperature range up to +85 °C

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48 VDC; compact, small and lightweight; noise and efficiency optimized axial fan
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings or ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 22
- Electrical protection class: III
- Weight: 66 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Moisture protection
- Degree of protection: up to IP68

Special features

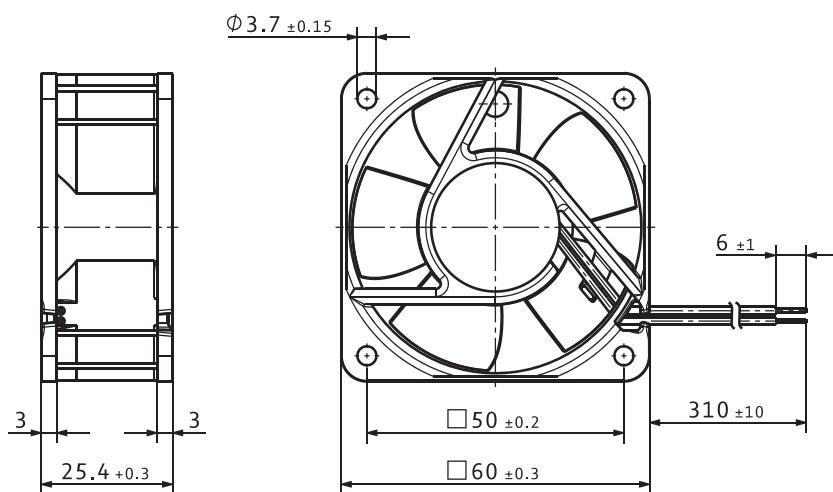

- Some fan types suitable for use at high ambient temperatures up to 85 °C.

- Weight: 95 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Degree of protection: up to IP68

Special features

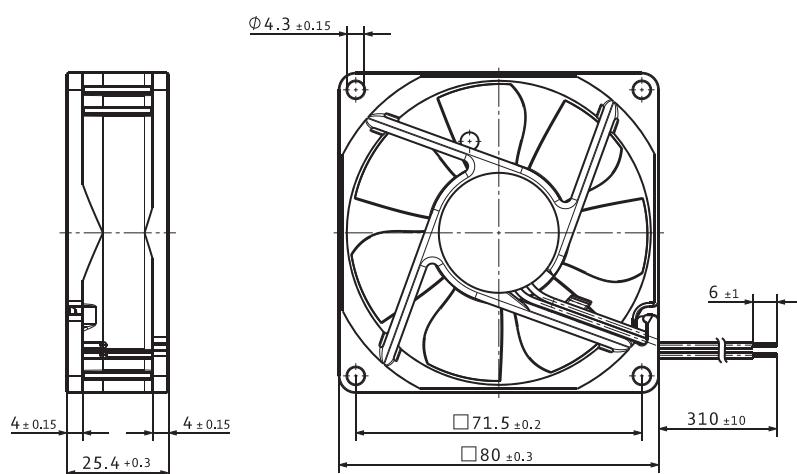

- Some fan types suitable for use at high ambient temperatures up to 85 °C.

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48 VDC; compact, small and lightweight; noise and efficiency optimized axial fan
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings or ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 24
- Electrical protection class: III
- Weight: 95 g

Approvals

- 12 and 24 VDC: DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA
- 48 VDC: DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Degree of protection: up to IP68

Special features

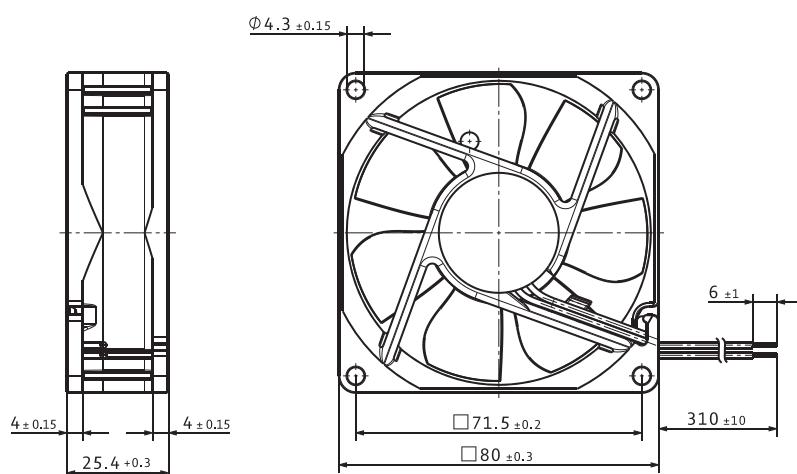

- Some fan types suitable for use at high ambient temperatures up to 85 °C.

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48 VDC; compact, small and lightweight; noise and efficiency optimized axial fan with rigid characteristic curve
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 24 (H3 and H4: AWG 22)
- Electrical protection class: III
- Weight: 160 g (H3 and H4: 200 g)

Approvals

- 12 and 24 VDC: DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA
- 48 VDC: DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

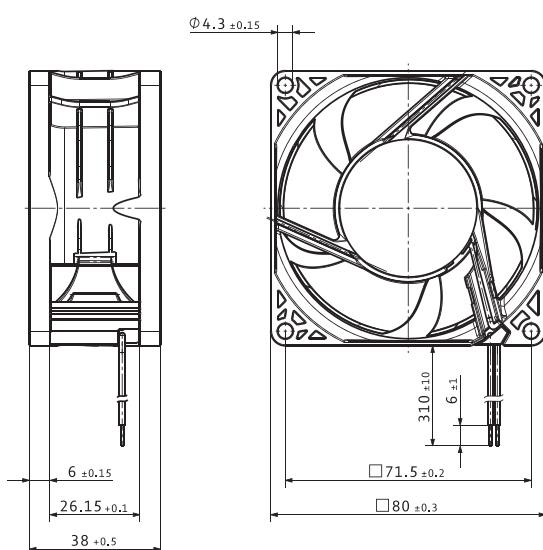

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Degree of protection: up to IP68

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48 VDC; compact, small and lightweight; noise and efficiency optimized axial fan of the S-Panther series
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 24
- Electrical protection class: III
- Weight: 190 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA
- optional: DIN EN 60079-7, Group IIA, T4

Options

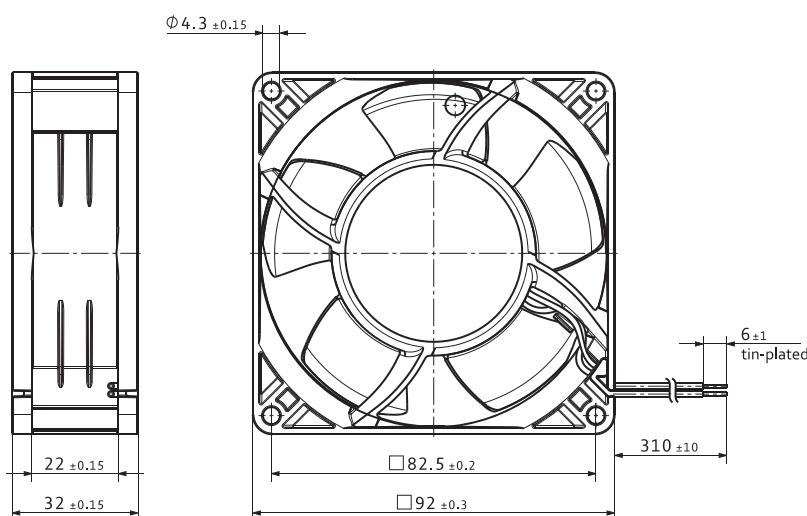

- Speed signal
- Go / NoGo alarm
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic + Metal
- Impeller: Plastic

Characteristics

- Version: DC fan available in 48 VDC; counter-rotating fan with two counter-rotating fan wheels and aluminum flange with integrated guide blades; extraordinarily pressure-oriented
- Direction of air flow: exhaust over struts
- Direction of rotation: counter-rotating
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Molex plug 43025-0800
Molex contacts 43030-0003
- Electrical protection class: II
- Weight: 600 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

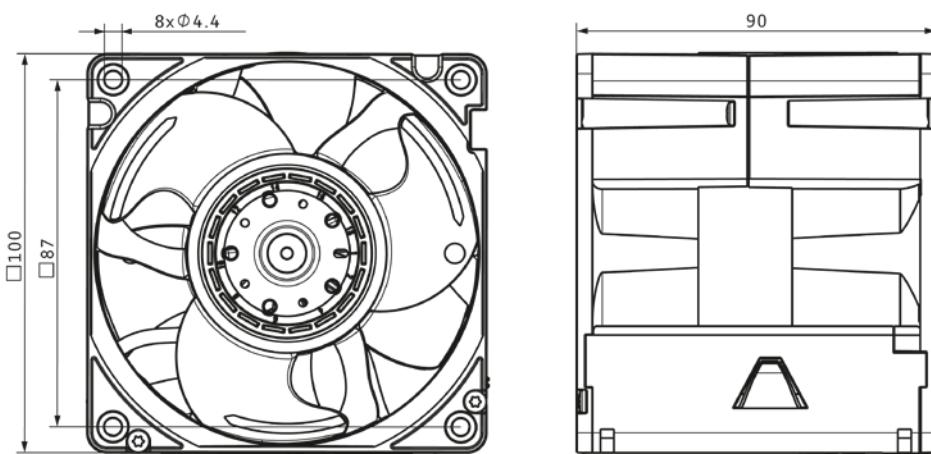

- Speed signal
- Go / NoGo alarm
- PWM control input
- Analog control input
- Moisture protection

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12 VDC; axial fan designed for maximum noise reduction with volume-oriented characteristic curve and round housing; reversibility and symmetrical fan impeller enable identical air performance values in both directions of rotation
- Direction of air flow: exhaust over struts / intake over struts
- Direction of rotation: reversible
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 26
- Electrical protection class: III
- Weight: 170 g

Approvals

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48VDC; compact and lightweight; noise and efficiency optimized axial fan of the S-Panther series
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 24
- Electrical protection class: III
- Weight: 250 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)
- optional: DIN EN 60079-7, Group IIA, T4

Options

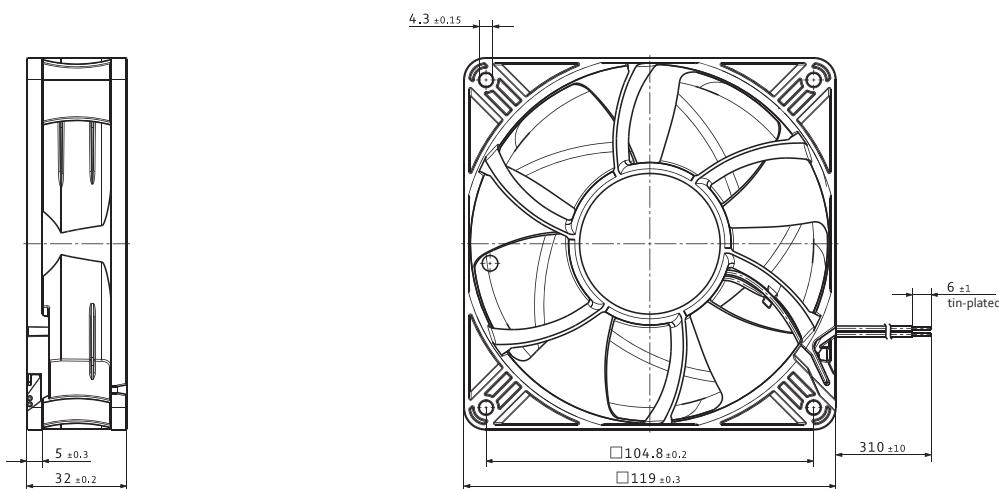

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Metal
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48VDC; compact and powerful; noise and efficiency optimized axial fan
- Direction of air flow: intake over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings and sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: On flat connectors, 2,8 x 0,5 mm also available with wires as an option
- Electrical protection class: III
- Weight: 390 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Special features

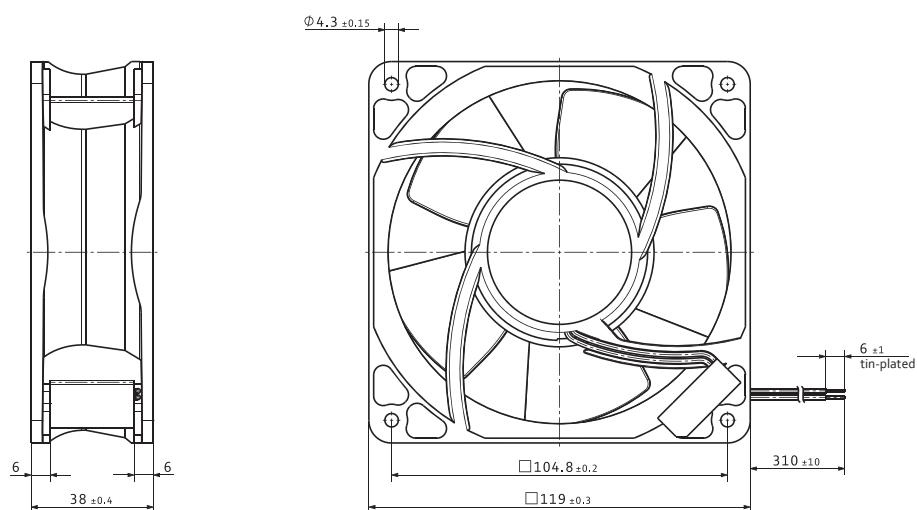

- Housing with grounding lug for screw M4 x 8 (Torx)

Material/Surface

- Housing: Combined (metal flange, plastic inlet nozzle)
- Impeller: Plastic

Characteristics

- Version: DC fan available in 48VDC; new single stage principle with highly innovative aerodynamic design; extraordinarily pressure-oriented with outstanding noise values
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: exposed wire
- Electrical protection class: III
- Weight: 980 g

Approvals

- Approvals:
VDE (EN62368), UL, CSA, CCC, EAC, CE, UKCA
- EMV (Immunity to interference/
Interference emission):
Interference emission acc. to EN55032
Immunity to interference acc. to EN61000-4

Options

- Output signals:
Tacho /2; Alarm (Go/NoGo + Trip Speed)
- Input signals:
Multi-options input; I + T
- Extended protection against environmental
conditions: Parylene
- Predictive Maintenance (FanCheck)
- Housing with grounding lug for screw
M4 x 8 (Torx)

Special features

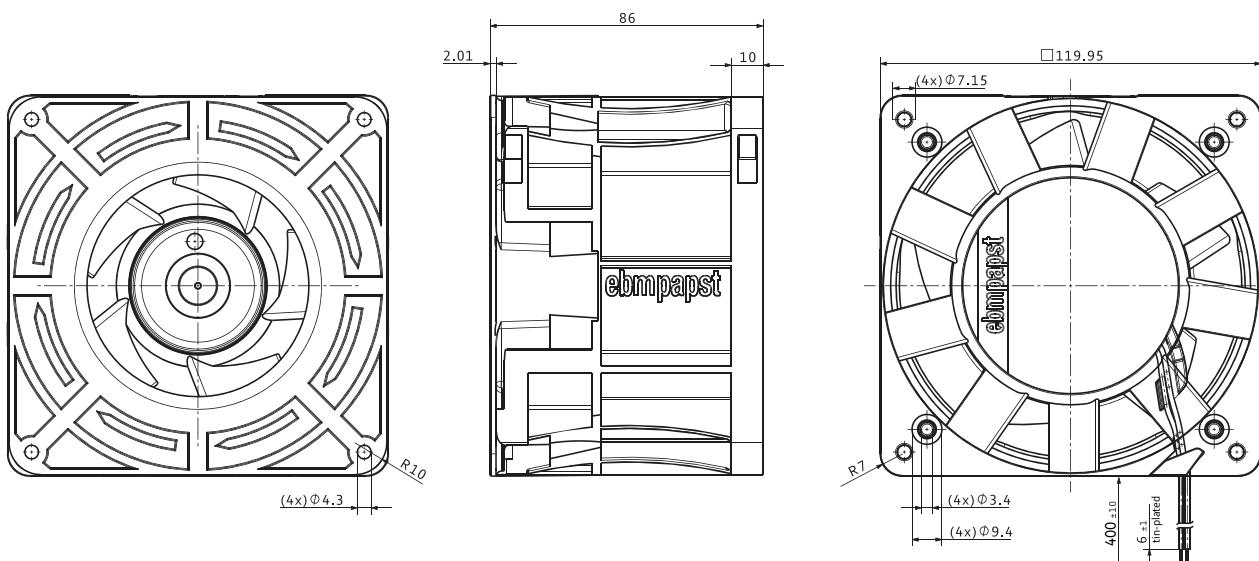

- Ready for Restart (R4R) enables safe startup
with external drive

more at	www.ebmpapst.com

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Plastic; optional metal + metal flange
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48VDC; diagonal design; compact and powerful; noise and efficiency optimized diagonal fan
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 22
- Electrical protection class: III
- Weight: 415 g (with metal housing: 490 g)

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP54

Special features

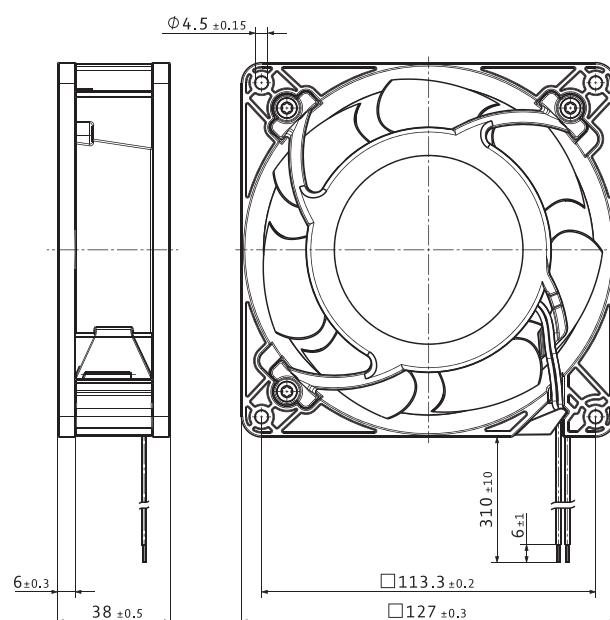

- Housing with grounding lug for screw M4 x 8 (Torx)

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Metal
- Impeller: Plastic

Characteristics

- Version: DC fan available in 12, 24 or 48VDC; compact and powerful; noise and efficiency optimized axial fan
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via single wires AWG 22
- Electrical protection class: III
- Weight: 725 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Special features

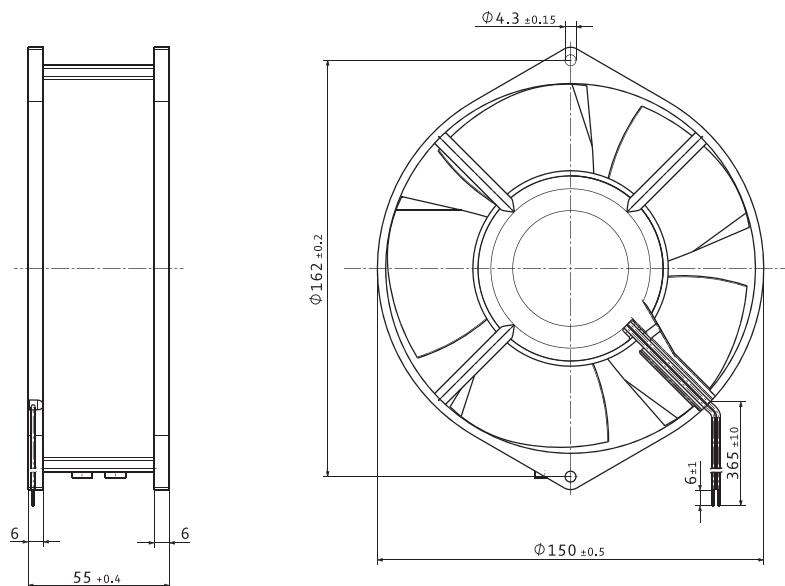

- Housing with grounding lug for screw M4 x 8 (Torx)

Subject to changes. * Variant with extended voltage range available on request.

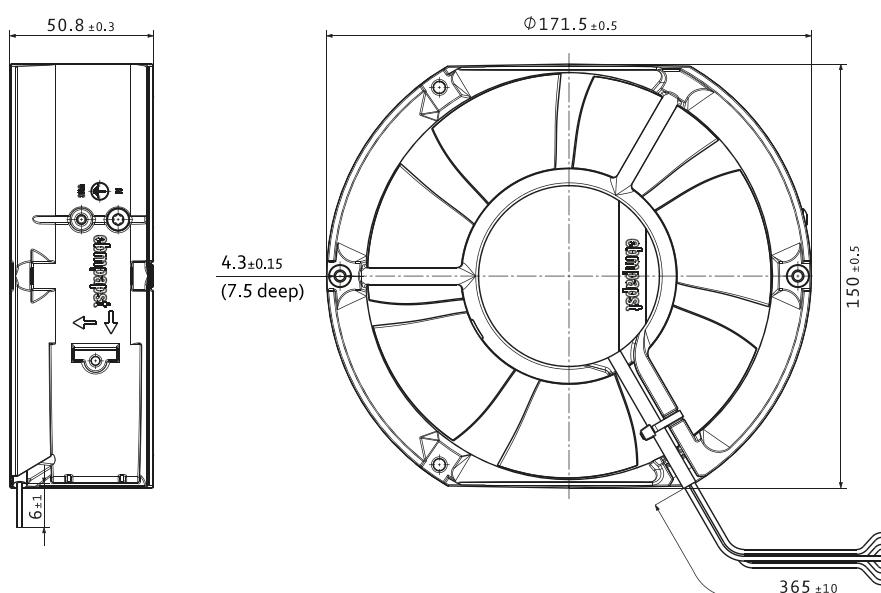

The fan types 6448 TD... and 6448 TDHH... are available in customer-specific, custom-developed variants only.

The figures indicated are technically feasible benchmark values. The fan types can be specially adapted to your application with signal outputs and control inputs.

For details of the technical possibilities, refer to the chapters on the sensor signal, alarm signal and control inputs beginning on page 178.

more at	www.ebmpapst.com

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Metal
- Impeller: Plastic

Characteristics

- Version: DC fan available in 48VDC; compact and powerful; noise and efficiency optimized axial fan with 3-phase TurboDrive (TD) motor of the S-Panther series
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 18, 20;
Speed and alarm signal: AWG 22
- Electrical protection class: I or III (performance-related)
- Weight: 890 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input (Standard)
- Analog control input
- Multi-options control input
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP68

Special features

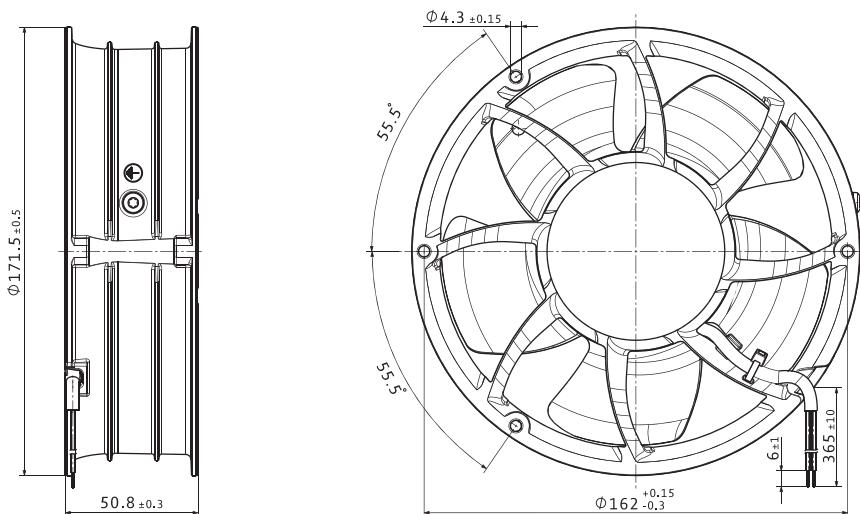

- Highly efficient and smoothly operating 3-phase fan drive
- Housing with grounding lug for screw M4 x 8 (Torx)

Measuring conditions

Air performance measured according to: ISO 5801, Installation category A, without contact protection.

Air performance measured according to: ISO 5801. Installation category A, without contact protection.
Noise: Total sound $P_{A,w}$ per level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebm-papst.com/general-conditions>

Material/Surface

- Housing: Metal
 - Impeller: Plastic

Characteristics

- Version: DC fan available in 24 or 48VDC; diagonal design; compact and powerful; noise and efficiency optimized diagonal fan with 3-phase TurboDrive (TD) motor
 - Direction of air flow: exhaust over struts
 - Direction of rotation: counterclockwise, looking towards rotor
 - Installation position: any
 - Bearing: Ball bearings
 - Operating mode: Continuous operation (S1)
 - IP protection class: IP20
 - Electrical hookup: AWG 18,
Input and output signals AWG 22
 - Electrical protection class: I or III
(performance-related)
 - Weight: 960 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
 - Go / NoGo alarm
 - Alarm with speed limit
 - External temperature sensor
 - Internal temperature sensor
 - PWM control input (Standard)
 - Analog control input
 - Multi-options control input
 - Moisture protection
 - Salt spray protection
 - Degree of protection: up to IP68

Special features

- Highly efficient and smoothly operating 3-phase fan drive
 - Housing with grounding lug for screw M4 x 8 (Torx)

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Combined (metal flange, plastic inlet nozzle)
- Impeller: Plastic

Characteristics

- Version: DC fan available in 48VDC; compact and powerful; innovative impeller design with rotating fan housing leads to maximization of efficiency and noise optimization
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation(S1)
- IP protection class: IP20, up to IP68 on request
- Electrical hookup: exposed wire
- Electrical protection class: III
- Weight: 1.5 kg

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC

Options

- Output signals: speed /2; alarms (Go/NoGo + Trip speed)
- Input signals: Multi-options input; I + T
- Predictive Maintenance (FanCheck)

Special features

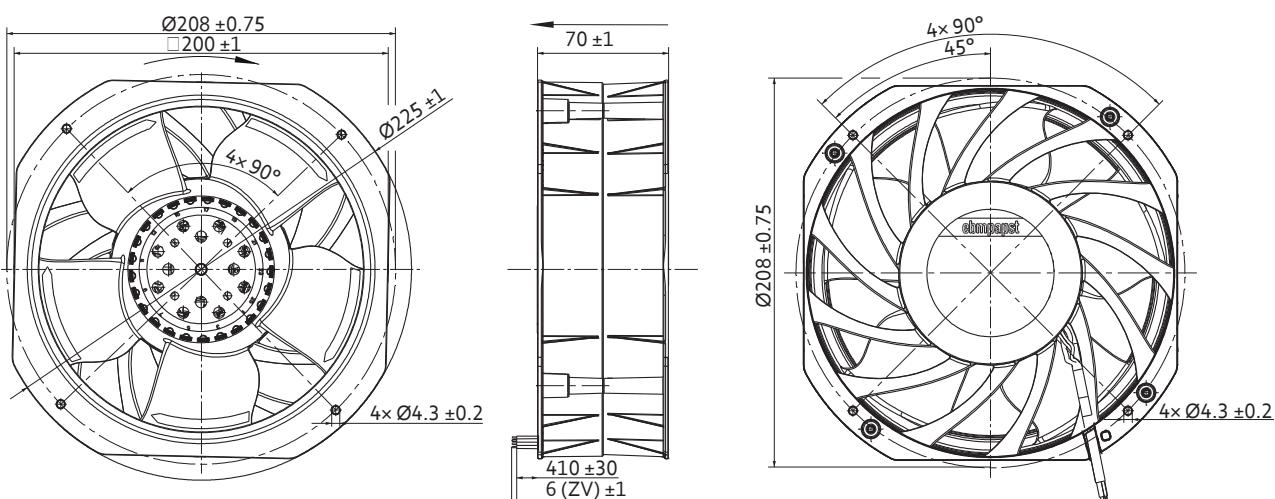

- Ready for Restart (R4R) enables safe startup with external drive
- with moisture protection (see page 266)
- with grounding screw M4x8 (Torx)

Product overview

DC centrifugal fans

Our DC centrifugal product range includes fans for every application. Where it's a free-running impeller or a complete, ready-to-install, compact housing with inlet nozzle.

all fan types with efficient, brushless motor technology, electronically commutated drive and electronic reverse polarity protection impress with their long life expectancy and outstanding efficiency.

This reduces the thermal load, thus ensuring maximum efficiency and a long service life.

Conforming to IP20 as standard, we also offer environmental protection solutions up to IP68 and IP6k9k to meet the highest requirements.

GreenIntelligence enables the fan speed to be intelligently controlled and noise-optimized, efficient and tailored use to be monitored.

DC centrifugal fans

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see http://www.ebmpapst.com/general_conditions

Material/Surface

- Scroll housing: Plastic
- Impeller: Plastic

Characteristics

- Version: Centrifugal fan in 12VDC or 24VDC with forward-curved impeller; compact and powerful
- Direction of air flow: axial: intake; centrifugal: exhaust
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 26
- Electrical protection class: III
- Weight: 36 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

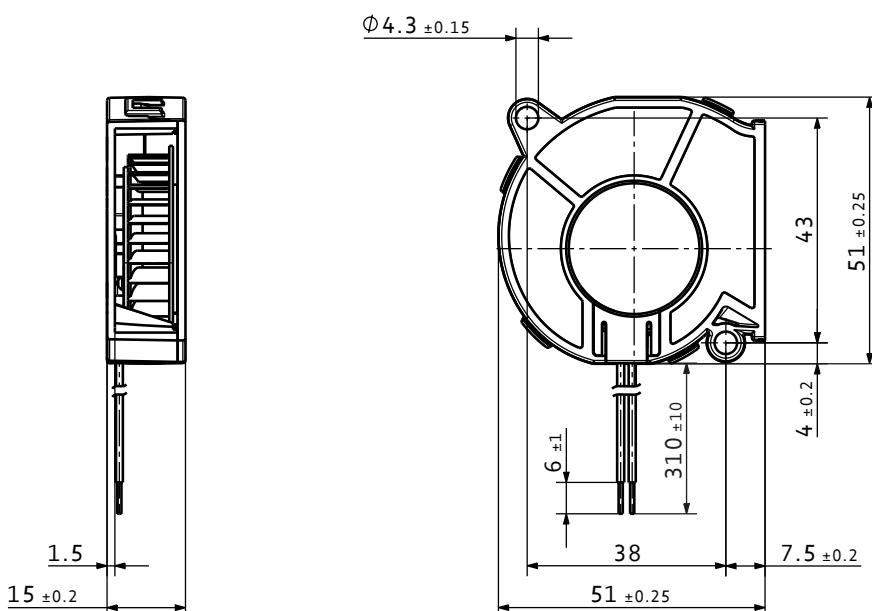

- Speed signal
- PWM control input
- Moisture protection

Material/Surface

- Scroll housing: Plastic (FDA approved)
- Impeller: Plastic (FDA approved)

Mechanische Characteristics

- Version: Small powerful centrifugal blower in 12VDC and 24VDC, Highly dynamic motor behavior, low noise and max pressure increase
- Direction of air flow: axial: intake; centrifugal: exhaust
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 22
- Electrical protection class: III
- Weight: 160 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Hose fitting at air inlet
 - Diameter 22 mm
- PWM control input (Standard)
- Analog control input

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Scroll housing: Plastic
- Impeller: Plastic
- Base plate: Sheet steel

Characteristics

- Version: Centrifugal fan in 12VDC, 24VDC or 48VDC with backward-curved impeller; compact and powerful
- Direction of air flow: axial: intake; centrifugal: exhaust
- Installation position: any
- Bearing: Ball bearings/Sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 22; 48 V type: Flat plug; 6,3 x 0,8 mm for ground conductor
- Electrical protection class: III
- Weight: 730 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

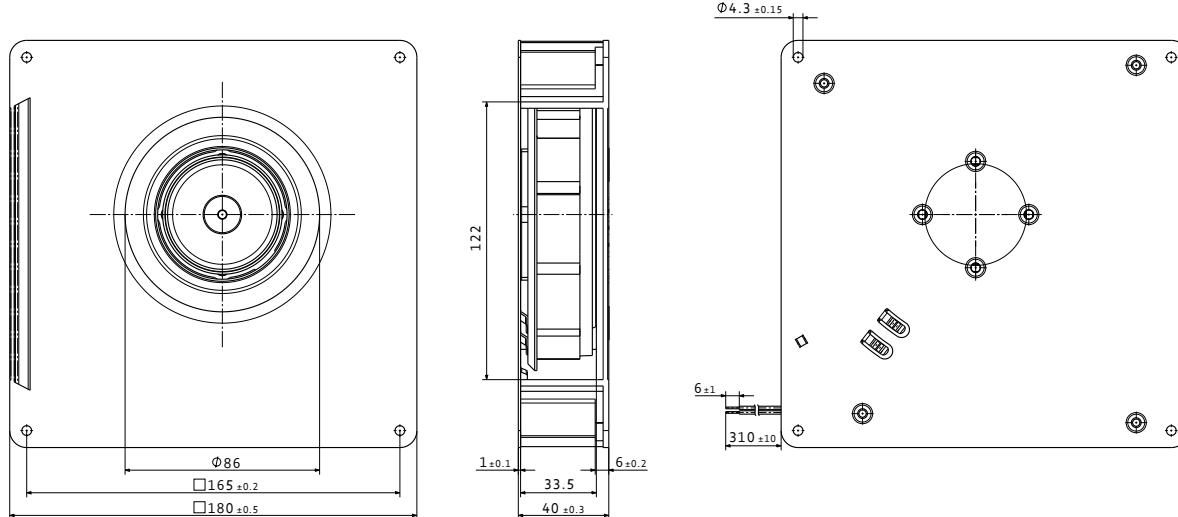

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: IP 54 / IP 68

- Impeller: Plastic

Characteristics

- Version: Centrifugal fan in 24VDC or 48VDC with backward-curved impeller; powerful due to 3-phase motor concept; low-noise operation
- Direction of air flow: axial: intake; centrifugal: exhaust
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 18, 20 or AWG 22; speed signal and control input AWG 22
- Electrical protection class: III
- Weight: 1560 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

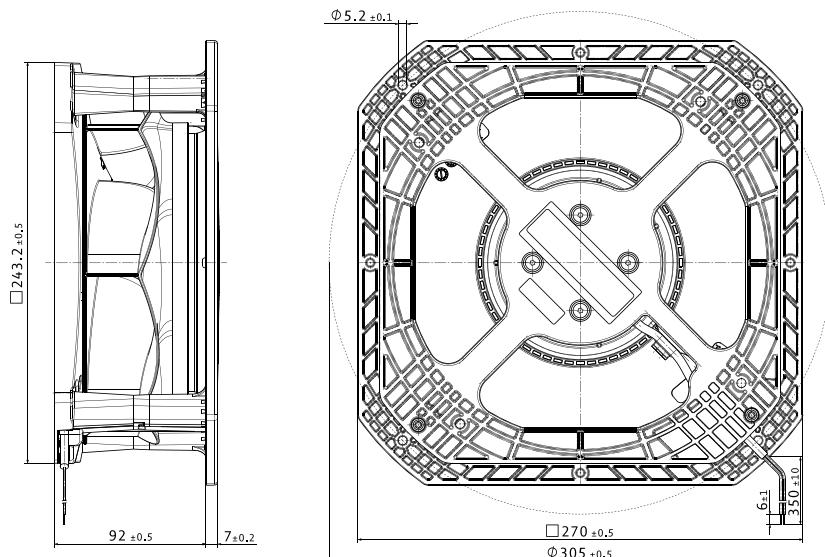

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: IP 54

DC centrifugal fans

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Impeller: Plastic

Characteristics

- Version: Centrifugal fan in 24VDC or 48VDC with backward-curved impeller; powerful due to 3-phase motor concept; low-noise operation
- Direction of air flow: axial: intake; centrifugal: exhaust
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 18, 20 or AWG 22; speed signal and control input AWG 22
- Electrical protection class: III
- Weight: 890 g; 460 g RadiCal

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Multi-options control input
- Moisture protection
- Salt spray protection
- Degree of protection: IP68

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Impeller: PA plastic
- Rotor: Painted black

Characteristics

- Version: DC centrifugal fan – RadiCal®, backward-curved, single inlet
- Direction of rotation: clockwise, looking towards rotor
- Installation position: Shaft horizontal or rotor on top; rotor on bottom on request
- Bearing: Maintenance-free ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP44, depending on installation and position
- Electrical protection class: III; requires supply with safety extra-low voltage SELV
- Weight: 1.85 kg

Approvals

- EN 62368-1;

Material/Surface

- Impeller: Plastic

Characteristics

- Version: Centrifugal fan in 24VDC or 48VDC with backward-curved impeller; powerful due to 3-phase motor concept; low-noise operation
- Direction of air flow: axial: intake; centrifugal: exhaust
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings/Sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
single wires AWG 18, 20 or AWG 22;
speed signal and control input AWG 22
- Electrical protection class: III
- Weight: 890 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC (only necessary >36V)

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Multi-options control input
- Moisture protection
- Salt spray protection
- Degree of protection: IP68

VBS0250RUNES

DC centrifugal fans · max. 1 640 m³/h · Ø 250 mm

from page 14	Definitions
from page 350	Accessories
more at	www.ebmpapst.com

Material/Surface

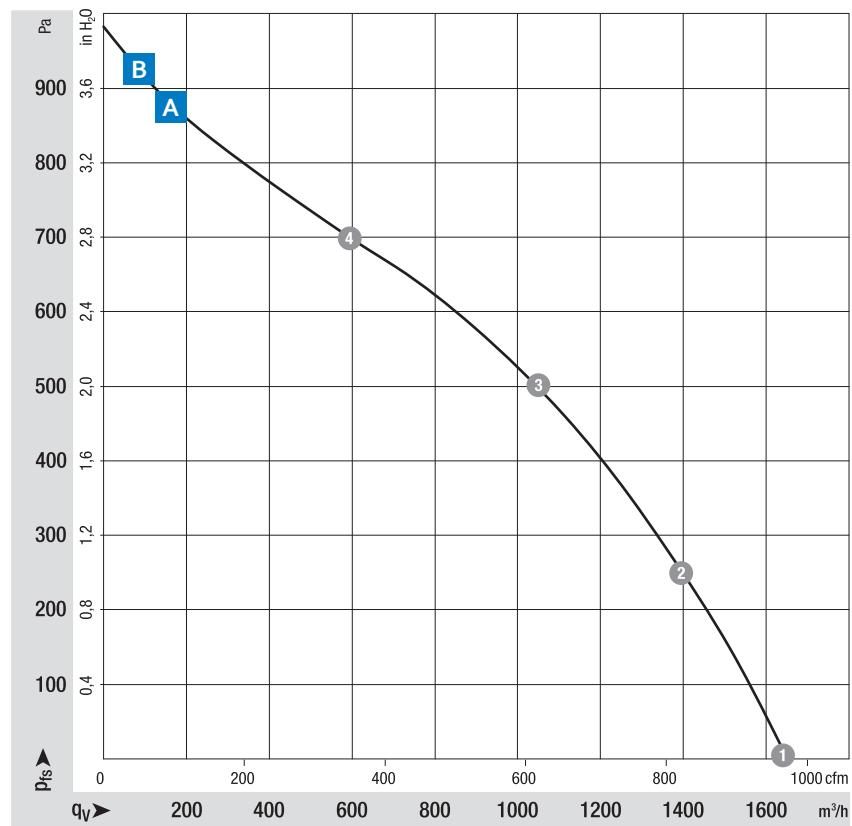

- Impeller: PA plastic
- Rotor: Painted black

Characteristics

- Version: DC centrifugal fan – RadiCal®, backward-curved, single inlet
- Direction of rotation: clockwise, looking towards rotor
- Installation position: Shaft horizontal or rotor on top; rotor on bottom on request
- Bearing: Maintenance-free ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP 44, depending on installation and position
- Electrical protection class: III; requires supply with safety extra-low voltage SELV
- Weight: 2.10 kg

Approvals

- EN 62368-1; CE; EAC; CCC on request (only applicable with >36V)

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

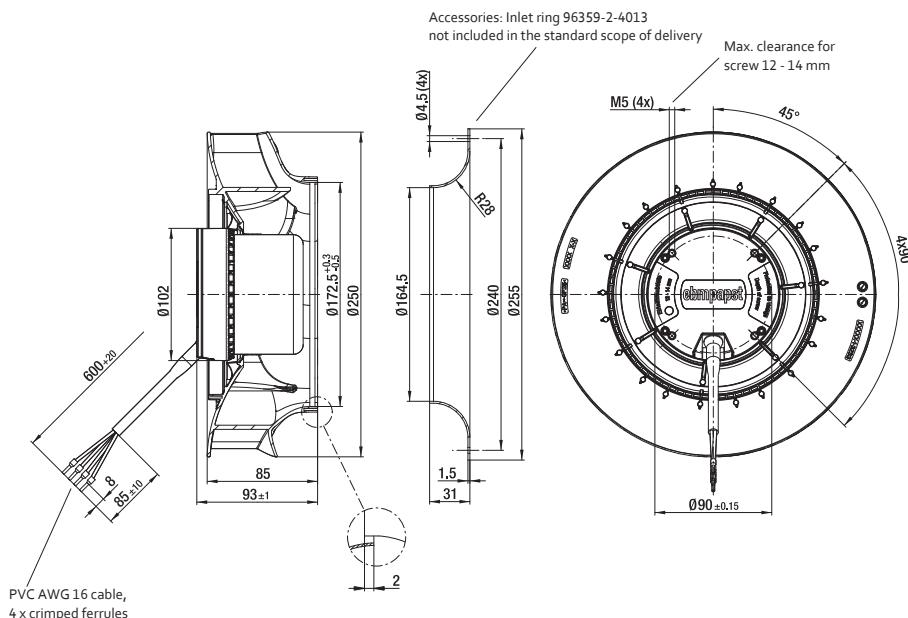

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Aluminum
- Housing side parts: Plastic
- Impeller: Aluminum

Characteristics

- Version: Tangential blower in 12 VDC and 24 VDC. Uniform laminar air flow over the entire length
- Bearing: Ball bearings/Sleeve bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: single wires AWG 24
- Electrical protection class: III
- Weight: 235 / 290 / 380 / 415 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Speed signal
- Moisture protection

Material/Surface

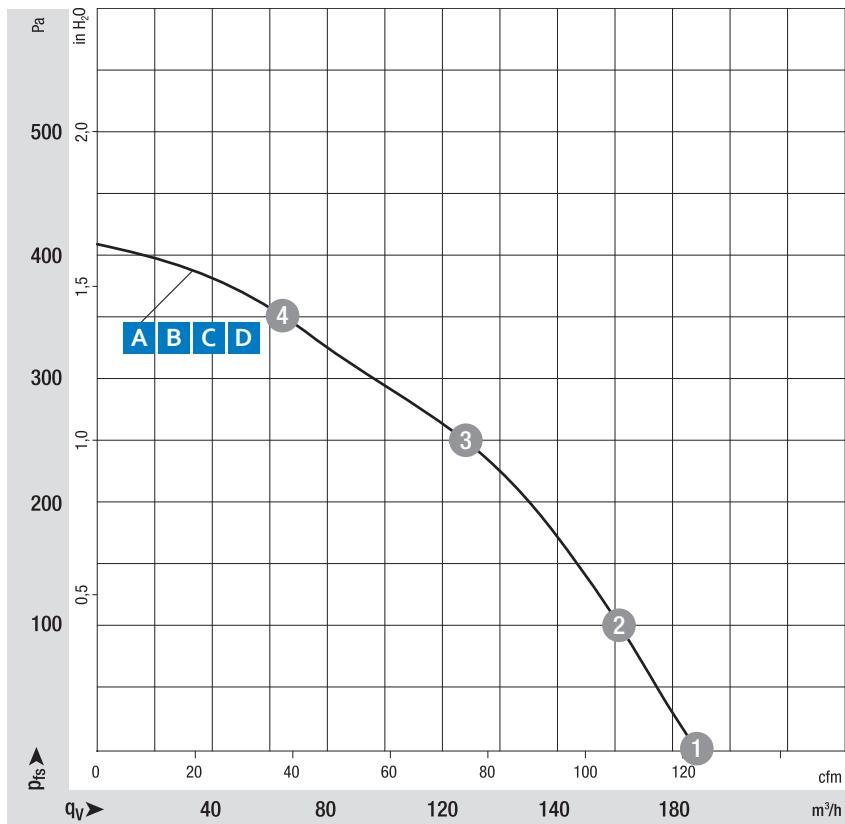

- Housing: Die-cast aluminum
- Impeller: Hot-dip galvanized sheet steel
- Rotor: Painted black

Characteristics

- Version: DC centrifugal fan with housing (flange), forward-curved, single inlet
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Maintenance-free ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP 22 ; depending on installation and position
- Electrical protection class: III; requires supply with safety extra-low voltage SELV
- Weight: centrifugal fan 1.0 kg; centrifugal blower 2.5 kg

Approvals

- EAC;
- B + D** EN 60034-1; EN 60204-1; EN 60335-1; CCC on request (only applicable with >36V)

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

Technical information

Cooling capacity and efficiency

Greater power density, increasing miniaturization and extreme electronic component density are placing increased demands on the cooling capacity and efficiency of fans. Therefore, intelligent and space-saving integration of the fan in the device configuration is very important:

- Tailor-made cooling adapted to the situation as and when required.
- Programmable cooling by defining speed profiles.
- Transparency of function thanks to complete, interactive monitoring in all operating conditions.

Standard fans in electronics cooling have proven themselves a million times over.

With a constant speed and an appropriate sound level, they continuously provide the air flow required for extreme cases. But these extreme situations occur seldom – if at all – during operation. What is needed is an intelligent fan that adapts automatically to the level of cooling required at the time.

ebm-papst provides intelligent cooling concepts that are optimally adapted to practical requirements. For example:

Speed adjustment via temperature sensor

ebm-papst answers with a complete range of DC fans with temperaturecontrolled speed adjustment via a temperature sensor, available in a variety of standard dimensions.

Installation is very simple. Either an external temperature sensor in the form of an exposed wire that can be placed anywhere, or an internal sensor located directly in the fan hub in the air flow provides continuous and undissipated thermal information to the control electronics for speed adjustment. A range of temperature sensors can be found on page 262.

DC fans with separate control input

Open or closed-loop speed control is also possible with DC fans that have a separate control input. So a control voltage or a pulse-width modulated signal can be used to vary the speed. These options are used primarily in devices that have the appropriate standard interfaces and require varied fans depending on the load.

Speed signal

DC fans with speed signal.

The integrated "electronic tachometer" continuously provides an actual speed signal for external evaluation. A very simple signal evaluation on the customer side informs the user of the current fan speed at all times. The speed signal is provided by a separate wire.

Alarm signal

For applications that require monitored fan operation with an alarm signal, ebm-papst offers a number of alarm signals variants. Depending on the type of fan in question, the signal will either be static, already evaluated, or a continuous, interface-compatible, high or low signal. The alarm signal is provided by a separate wire.

Powerful GreenTech motor

Fans with three-phase EC drives and microprocessor-controlled motor electronics. The torque of these three-phase motors, which is virtually independent of the rotor position, allows the fan to run very smoothly. The speed of these fans can be controlled over a very wide speed range by means of PWM, analog voltage, or temperature. Optionally, the fans can be supplied with reversible direction of rotation and active brake operation.

Robust over the long term

Our fan solutions offer maximum operational reliability even in harsh ambient conditions and are extremely durable. They withstand temperature changes, high humidity levels and UV light. We can say this with confidence because we subject each of our solutions to the following voluntary, extremely demanding tests:

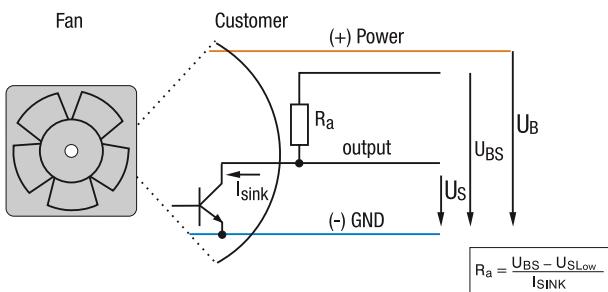

- Shock and vibration test
- Corrosion test
- Highly accelerated life test (HALT)
- Temperature change rain test
- EMC test

Speed signals

Speed signal /2

- Speed-proportional, square-wave signal for external monitoring of the fan motor speed
- 2, 3, or 6 pulses per revolution
- Open-collector signal output
- Extremely wide operating voltage range
- Easy adaptation to user interface
- Connection via separate cable
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or more interconnected fans.

Electrical hookup

All voltages measured to ground. External load resistor R_a / U_s / U_{BS} required.

Available on request

- Electrically isolated speed signal circuit
- Varying voltage potentials for power and logic circuit

Signal data

Type	VDC	mA	VDC	VDC	mA	Pulses per revolution*
12 / 24 V	≤ 0,4	2	≤ 30	30	4	2
48 V	≤ 0,4	2	≤ 60	60	4	2

Subject to changes.

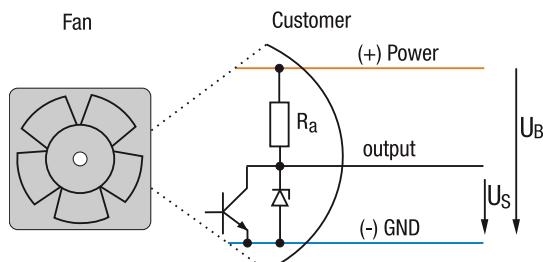

Standard value, can vary depending on fan series.

* Depending on the fan electronics other values are feasible e. g. 3 or 6.

Speed signal /12

- Speed-proportional, square-wave signal for external monitoring of the fan motor speed
- 2, 3, or 6 pulses per revolution
- TTL-compatible
- Integrated pull-up resistor
- Connection via separate cable
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or more interconnected fans.

Electrical hookup

All voltages measured to ground.

Available on request

- Electrically isolated speed signal circuit
- Varying voltage potentials for power and logic circuit

Signal data

Type	VDC	mA	VDC	mA	mA	Pulses per revolution*
12 / 24 / 48 V	≤ 0,4	1	2,5–5,5	1	1	2

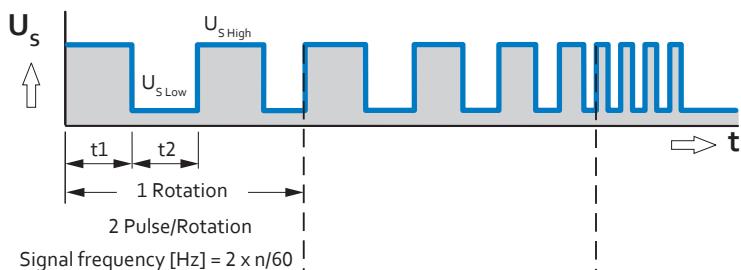

Subject to changes.

Standard value, can vary depending on fan series.

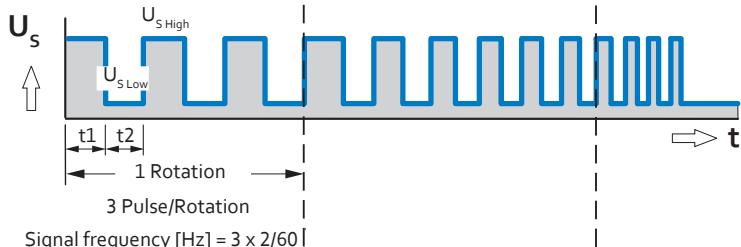

* Depending on the fan electronics other values are feasible e. g. 3 or 6.

Signal output voltage

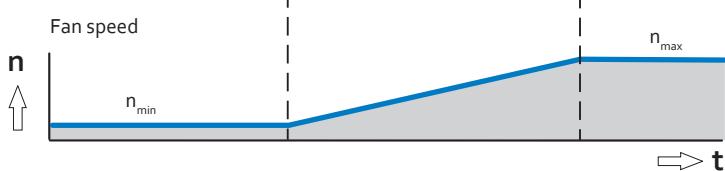

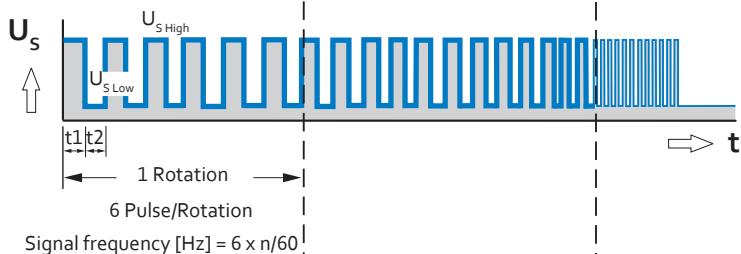

Standard signal for all types (exceptions see below)

For multi option control input and 4100 NH7, NH8 and 3250 J

All TD fans e.g. 6300 TD

Note

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Alarm signals

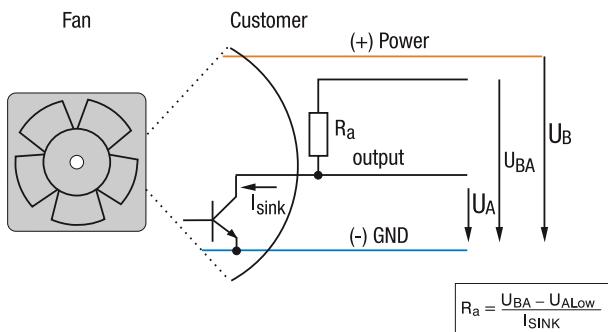

Alarm signal /17 speed limit

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous high signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to high.

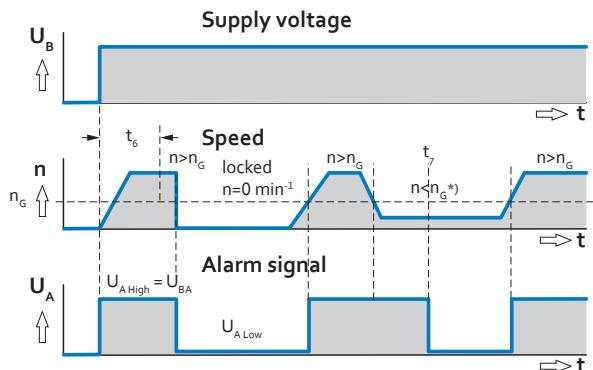

Available on request

- Integrated signal storage for subsequent recognition of short-term faults (latch).
- Alarm circuit open collector or TTL.
- Electrically isolated for maximum device safety; Defects in the power circuit do not affect the alarm circuit.

Electrical hookup

All voltages measured to ground. External load resistor R_a from U_A to U_{BA} required.

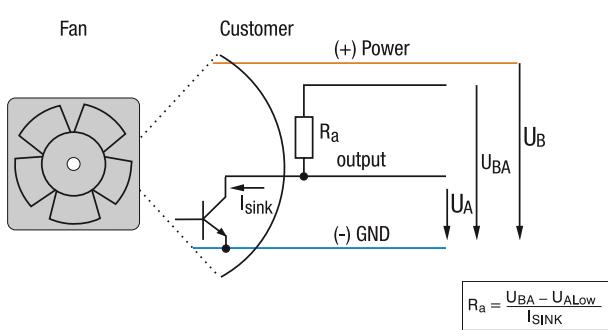

Alarm signal /19 speed limit

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous low signal during trouble-free operation within the permissible voltage range.
- High signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to low.

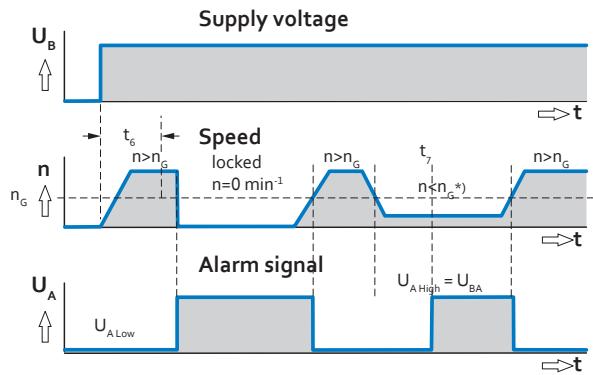

Available on request

- Integrated signal storage for subsequent recognition of short-term faults (latch).
- Alarm circuit open collector or TTL.
- Electrically isolated for maximum device safety; Defects in the power circuit do not affect the alarm circuit.

Electrical hookup

All voltages measured to ground. External load resistor R_a from U_A to U_{BA} required.

Alarm signal data

	Alarm output voltage $U_{A,LOW}$	Condition	Condition I_{sink}	Alarm output voltage $U_{A,HIGH}$	Condition	Condition I_{source}	Alarm operating voltage $U_{BA,max.}$	Max. permissible sink current
Type	VDC	mA	VDC	mA	VDC	mA		
12 / 24 V	≤ 0.4	$n > n_G$	2	≤ 30	$n > n_G$	0	30	10
48 V	≤ 0.4	$n > n_G$	2	≤ 60	$n > n_G$	0	60	10

Subject to changes.

Standard value, can vary depending on fan series.

Selectable parameters:

- Speed limit
- t6 Alarm signal suppression during start-up
- t7 Alarm delay time during run-up

For existing products, information about alarm signals is included in the product data sheet.

Note

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Alarm signals

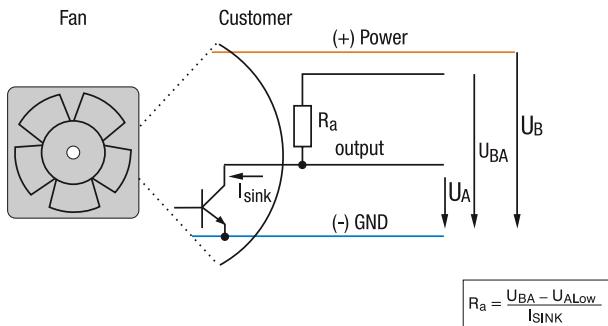

Alarm signal /37 Go / NoGo alarm

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous high signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to high.

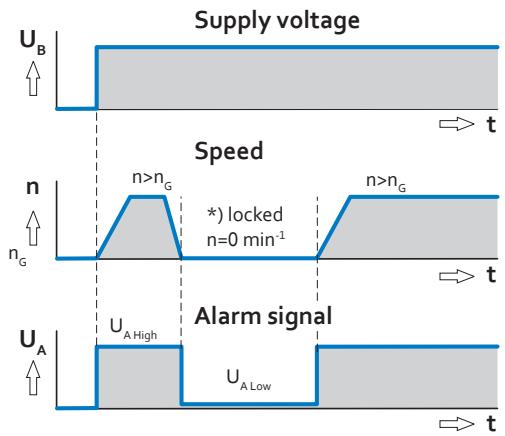

Available on request

- Alarm circuit TTL compatible

Electrical hookup

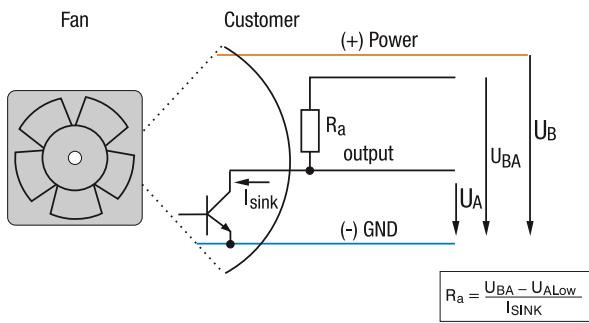

All voltages measured to ground. External load resistor R_a from U_A to U_{BA} required.

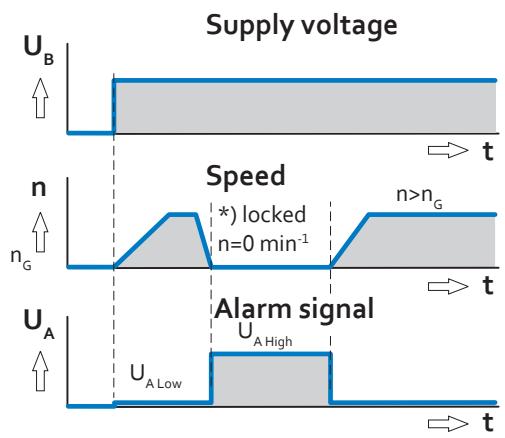

Alarm signal /39 Go / NoGo alarm

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous low signal during trouble-free operation within the permissible voltage range.
- High signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to low.

Electrical hookup

All voltages measured to ground. External load resistor R_a from U_A to U_{BA} required.

Alarm signal data

Type	Alarm output voltage $U_{A,LOW}$	Condition	Condition I_{sink}	Alarm output voltage $U_{A,HIGH}$	Condition	Condition I_{source}	Alarm operating voltage $U_{BA,max.}$	Max. permissible sink current
	VDC	mA	VDC	mA	VDC	mA		
12 / 24 V	≤ 0.4	$n > n_G$	2	≤ 30	$n > n_G$	0	30	10
48 V	≤ 0.4	$n > n_G$	2	≤ 60	$n > n_G$	0	60	10

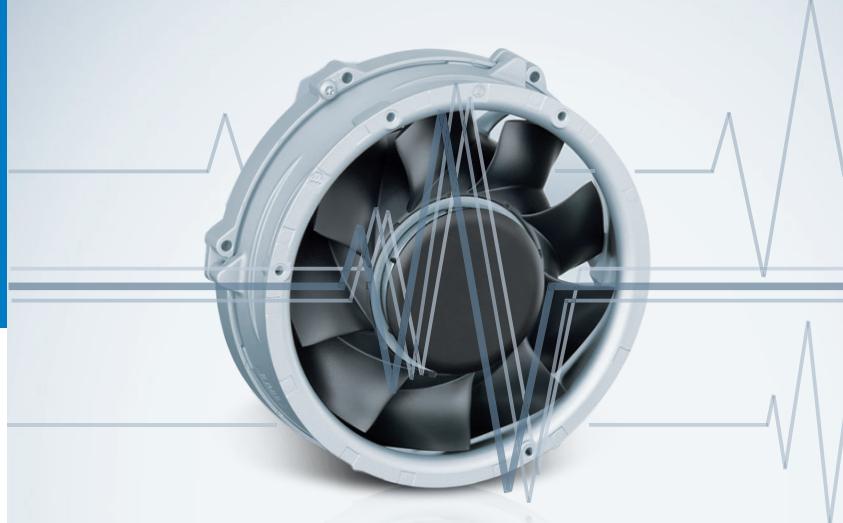

Subject to changes.

Standard value, can vary depending on fan series.

For existing products, information about alarm signals is included in the product data sheet.

Note

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Speed setting

via temperature sensor

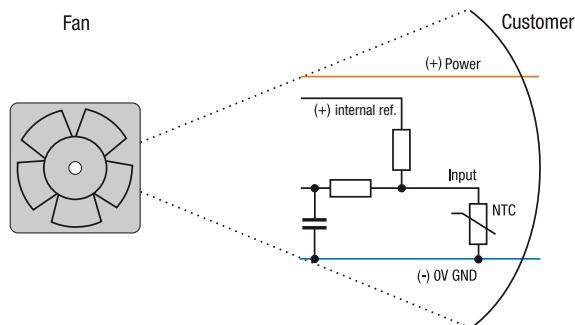

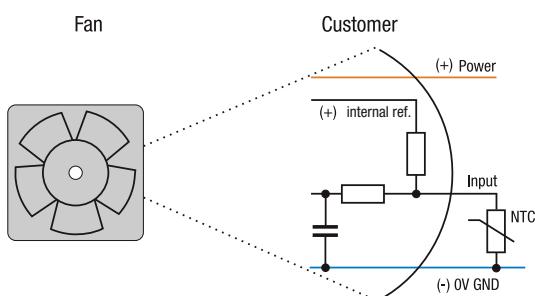

The control variable is a temperature sensor that is either integrated in the fan or connected to an additional control cable.

External temperature sensor type T

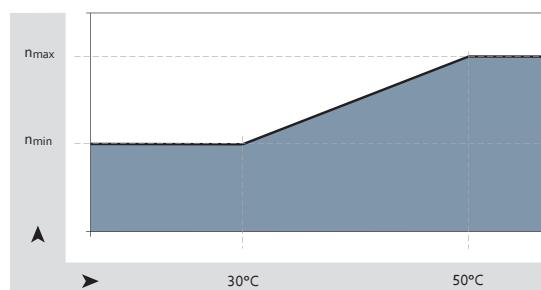

Ext. NTC resistor type LZ370 (p. 366) is required
(not included in the standard scope of delivery)

Internal temperature sensor type I

NTC integrated in the fan hub

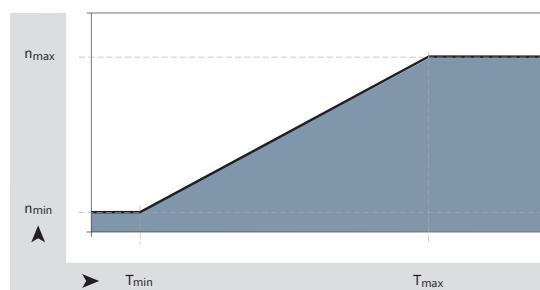

Standard speed/temperature curve
for type T and type I

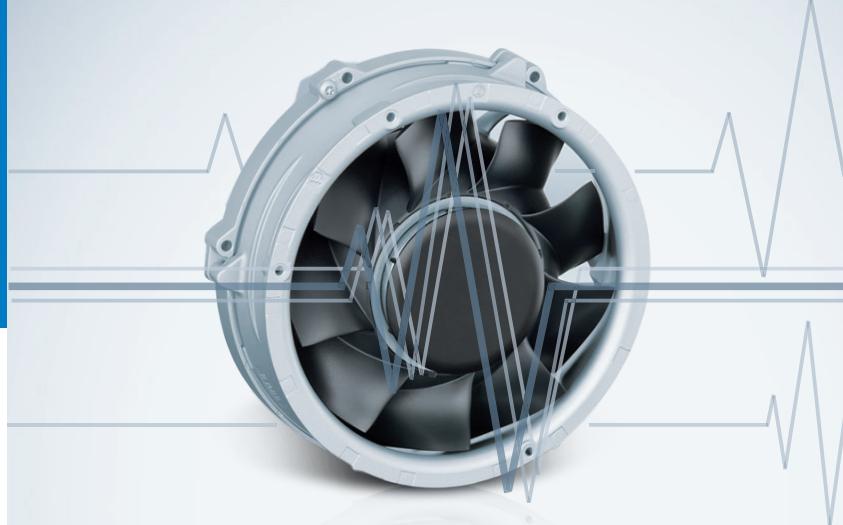

$n_{\text{min}} \approx \frac{1}{2} n_{\text{max}}$
 $T_{\text{min}} \approx 30 \text{ }^{\circ}\text{C}; T_{\text{max}} = 50 \text{ }^{\circ}\text{C}$

Optionally available with selectable
temperature/speed curve

$n_{\text{min}} \approx 800 \text{ 1/min}$ n_{max} based on model
 $T_{\text{min}} \approx 5 \text{ }^{\circ}\text{C}$ $T_{\text{max}} \leq 85 \text{ }^{\circ}\text{C}$, based on model

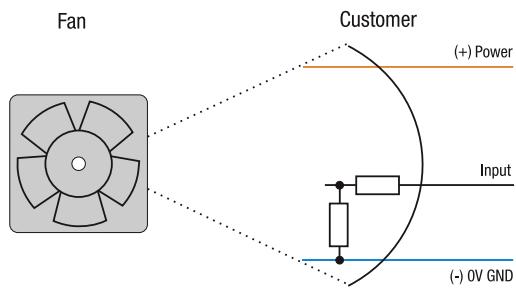

Speed setting

via control voltage
or PWM signal

The control variable is a PWM signal
or analog control voltage.

Speed setting via analog control voltage type A

Standard control range 0...10 V

Typical input resistance > 10 kΩ

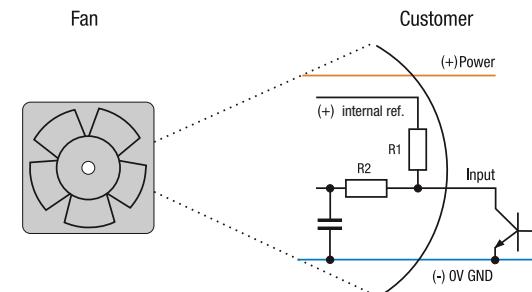

Speed setting via PWM type P

Standard PWM signal in two versions

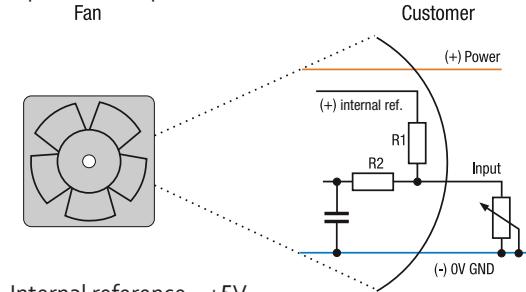

a) PWM frequency, mainly 1...10 kHz (0-100%),

Open-collector input

b) Four-wire interface according to Intel specifications for 12 VDC fans, PWM frequency 25 kHz, incl. speed signal /2

Optional with potentiometer

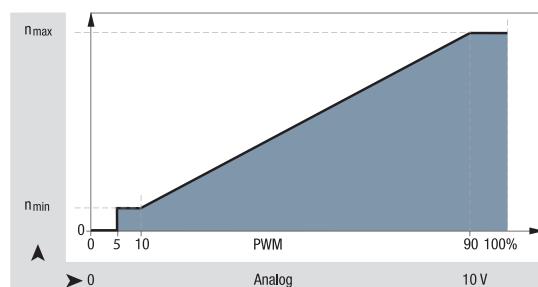

Internal reference = +5V

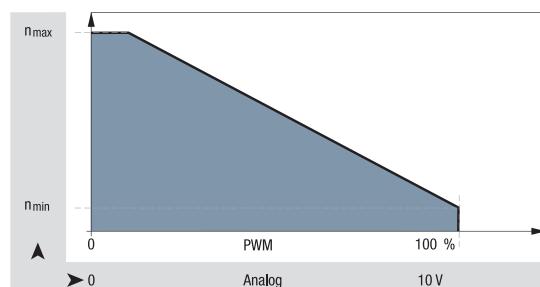

R1 typical 4.7...10 kΩ

R2 typical 100 kΩ

Standard P / A curve

Optionally available with selectable P / A speed curve

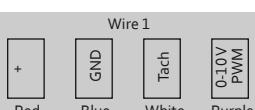

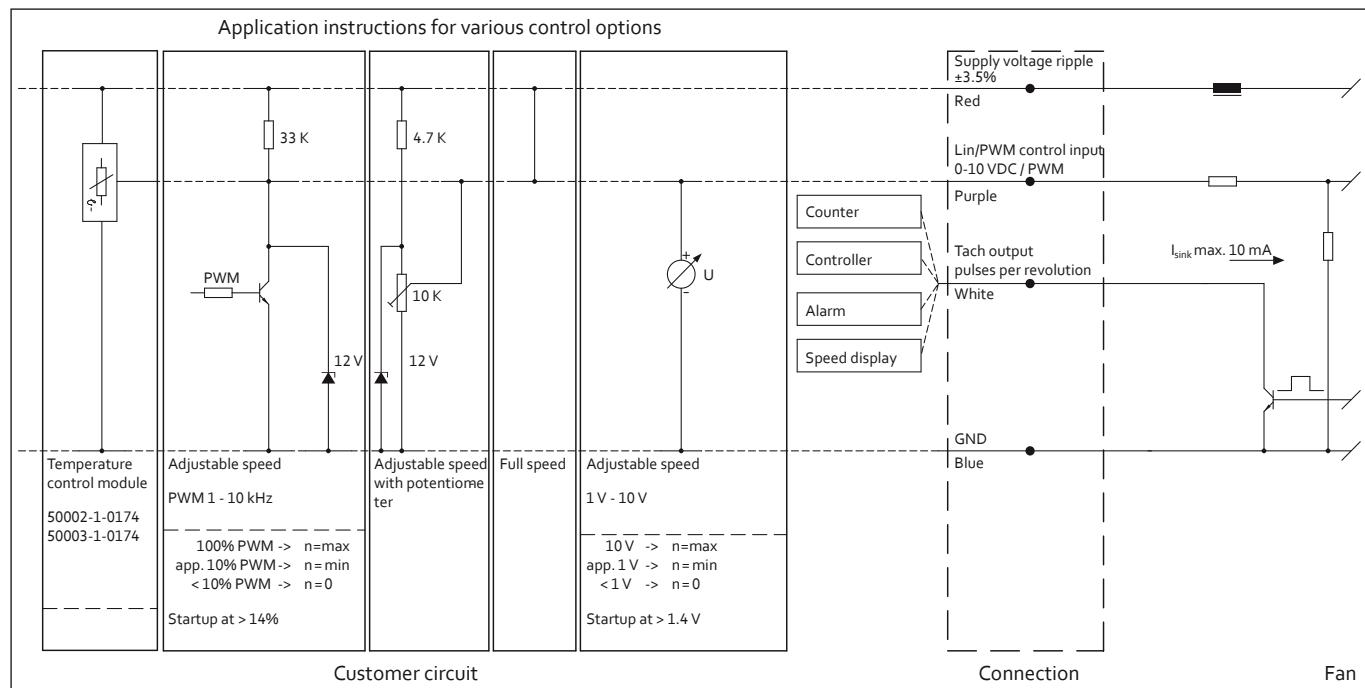

Speed setting

via multi-option control input

- Customer can operate input either with PWM signal, analog voltage, external temperature control module, or resistor.
- The control signal speed characteristics of the fan differ from the standard curve of the A and P inputs (see p. 263).
- To reach the maximum speed, the control cable must be connected to the U_B.
- The control input is usually combined with an open collector tachometer (type /2, see page 256)

Speed setting via multi-option control input type O

Wire	Connection	Color	Assignment/function
1	+	red	Supply voltage ripple ± 3,5 %
GND	blue		GND

Wire	Connection	Color	Assignment/function
1	Tach	white	Tach output: 3 Impulse / revolution
0-10V / PWM	purple		Control input (Impedance 100 kΩ)

FanCheck

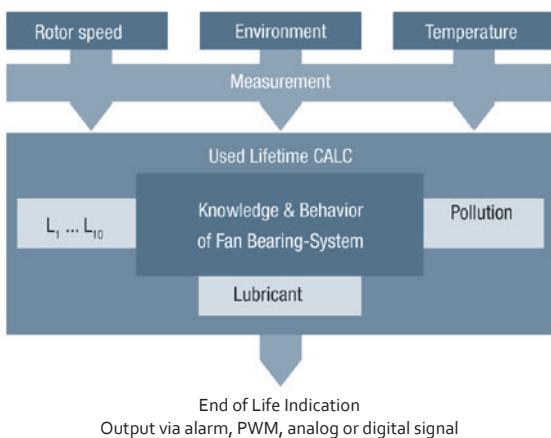

FanCheck is a diagnostic tool integrated into the fan electronics for determining the remaining service life of the fan, dependant, upon temperature, speed, and preset environmental parameters.

The FanCheck system emits a pulse width modulated signal, which reflects the remaining service life of the fan. The pulse width is proportional to the remaining service life of the fan. The FanCheck signal has a pulse width of 10 % at the end of the service life and a pulse width of 90 % with full service life.

Basic data, such as the ball bearing system, bearing lubrication or lubricant used, are programmed in advance as parameters into the software.

The customer defines the environmental conditions, such as the use of fans in moist, dusty, or dirty environments; other parameters such as ambient temperature and speed are determined continuously. Based on all the influencing parameters, the software can, by means of a complex algorithm, calculate the remaining service life for each individual fan.

Functionality

R4R Ready for Restart

IT equipment such as servers, routers, and in-row cooling applications must be 100% operational. For this reason, maintenance work is often carried out during operation.

If a single fan or a plug-in unit with several fans is taken out of service for this purpose, this can create a tricky situation: The remaining fans must provide adequate air flow. As a result of this and the back pressure of applications, air flows through the fan taken out of service and it is driven by an external source, as with a wind turbine.

The problem is that when driven by an external source, these speeds can amount to several thousand revolutions per minute and in the opposite direction of rotation.

R4R manages a feat of strength: Thanks to high-torque motors and state-of-the-art electronics, it still guarantees a proper start-up process, enabling efficient and fast system maintenance, including the replacement of fans while the system is running.

Climate- and moisture protection

- Capable of satisfying special requirements for a broad range of applications
- Resistance of fans to environmental conditions such as dust, splashing water, humidity, spray water, and salt spray.
- Competent solutions to adapt fans to environmental conditions.

Moisture protection

A coat of paint over the motor and circuit board protect the fans against spray water and condensation.

Degree of protection IP 54 / IP 68*

In the degree of protection IP 54, the motor and circuit boards are coated and therefore protected against spray water and moisture. The degree of protection IP 68 is important for ebm-papst products, as it ensures a high degree of protection for the encapsulated motor and electronics against foreign bodies and water, while protecting the user against potential hazards upon contact. Degrees of protection higher than IP 68 are possible on request.

In addition, the IP68 protection enables ATEX certification according to DIN EN 60 079-7 (Group 2A, T4) for use in explosive atmospheres according to the certified protection class and resistance to salt spray.

Salt spray protection

Salt spray represents one of the most difficult requirements for product durability. ebm-papst has the technology to protect fans and blowers from salt spray reliably and for the long term.

Stainless steel bearings

Special bearings made of stainless steel provide additional protection.

Solutions that are available and are used may differ depending on the fan size. We would be glad to develop solutions tailored to the demands of your application.

Degree of protection – IP code*

Protection against foreign bodies and accidental contact (first digit)		Water protection (second digit)
X	No protection	X No protection
1	Protection against foreign objects > 50 mm (back of the hand)	1 Protection against dripping water or condensation
2	Protection against foreign objects > 12 mm (finger)	2 Protection against dripping water, fans tilted 15° from vertical
3	Protection against foreign objects > 2.5 mm (tool)	3 Protection against sprayed water up to 60° from vertical
4	Protection against foreign objects > 1 mm (wire)	4 Protection against sprayed water from all sides
5	Protection against dust in harmful quantities	5 Protection against low-pressure water jets
6	Dust-proof	6 Protection against high-pressure water jets
		7 Protection against temporary submersion (15 cm - 1 m)
		8 Protection against continuous submersion

* IP = International degree of protection marking
For AC- and EC-fans max. IP 65 available.

Product overview

GreenTech EC axial fans

EC axial compact fans, in particular our new AxiACi series, stand for flexibility, high efficiency and enable a wide range of applications.

The wide voltage possible in EC axial compact fans reduces the logistics costs and warehousing, as the fan, regardless of the line voltage, can be used with its specified values: without switching, the EC axial fan adapts to every power supply – from 90 to 264 VAC at line frequencies of 50 and 60 Hz. Voltage fluctuations in the power system are automatically compensated for.

Unlike conventional AC technology, the state-of-the-art drive concept of this fan series is not linked to a fixed power frequency. EC axial compact fans therefore offer a significantly higher air flow and a significant pressure increase.

The extremely quiet and highly efficient motor impresses with its long service life and is equally suitable for use in technologically demanding new projects and as a replacement for obsolete AC solutions.

GreenTech EC axial fans

Progress made by ebm-papst.

The best example: Greentech EC axial fans from ebm-papst.

Our latest fans in the AxiACi series stand for flexibility, high efficiency and enable a wide range of applications ranging from cooling and ICT applications to switch cabinet cooling. The best – all in the same dimensions as conventional AC fans. The extremely quiet and highly efficient motor impresses with its long service life and is the perfect replacement for obsolete AC solutions in particular. The wide voltage range (90-264 VAC) and operating temperatures of up to -40°C (also when starting) also offer a practical solution. Our GreenTech EC axial compact fans are available up to IP65 as an option and, thanks to corresponding certificates, are also suitable for use with natural refrigerants.

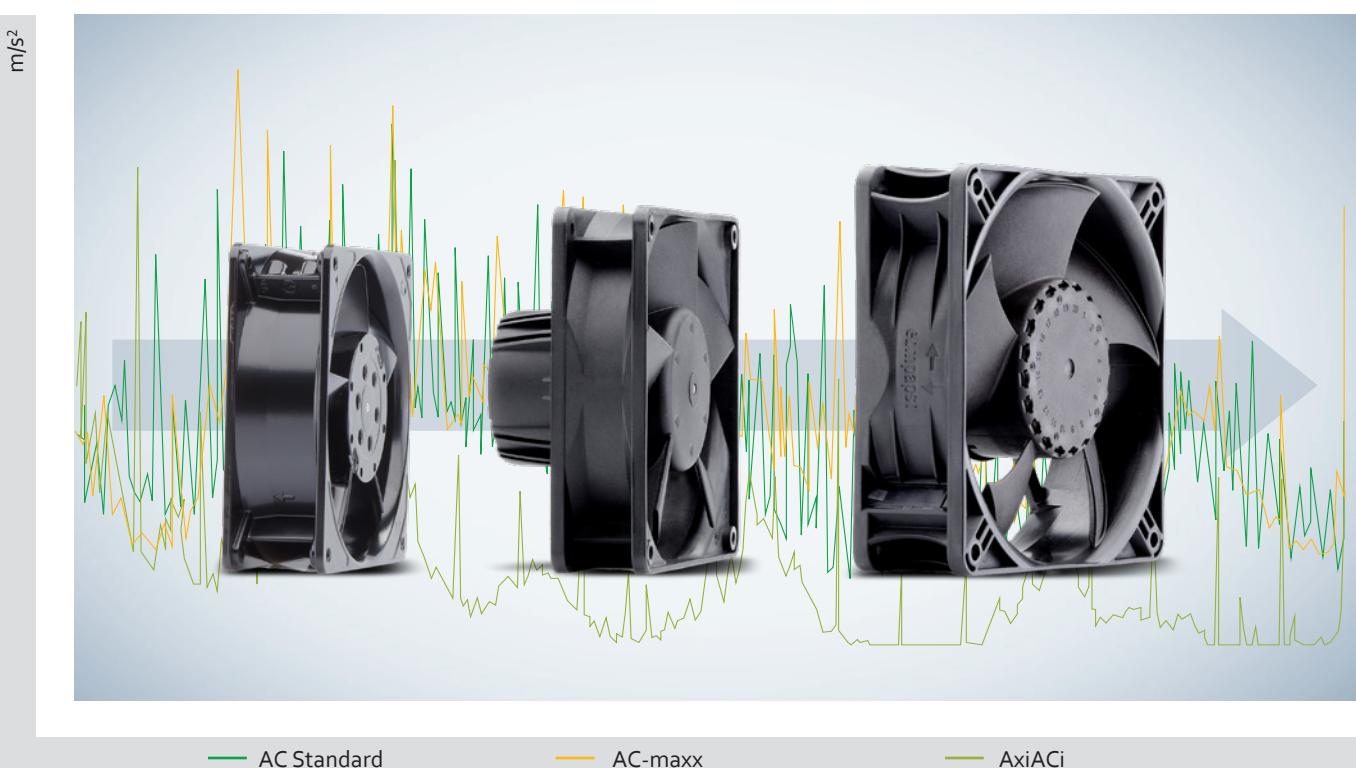

**Many years of experience, quality
and continuous product improvement**

Better, in the same size. Our products have been developed for many years and have been optimized to meet your requirements. Our new generation of GreenTech EC axial compact fans offer a wealth of advantages in the same dimensions as conventional AC fans. This makes switching your applications to the new fans much easier.

**Quiet is not always quiet when psychoacoustic,
subjective noise characteristics are at play.**

As well as increasing efficiency, one of our main objectives when further developing the pure AC fan series into our AxiACi series is significantly reducing noise as much possible – both in the aerodynamics and in the motor. In terms of aerodynamics, we achieve this with perfectly designed and coordinated fan housing/fan impeller combinations. A motor always generates vibrations that are transmitted to your application. In the worst-case scenario, in sound-wave form, these are considered disruptive. In the development phase, this structure-borne noise is difficult to predict and varies from application to application. Our aim is to develop motors with as little structure-borne noise as possible so that this problem does not occur in the first place. With our AxiACi motor technology, we have succeeded.

If we look at the sum of the acceleration levels, ACmaxx and AC 4656N are comparable. However, AxiACi120 has a noticeable lower base level and also significantly lower peaks during acceleration amplitudes and therefore its structure-borne noise is much less intrusive. As a result, it also offers noise benefits for sensitive applications.

Progress made by ebm-papst

That means for you:

Cost optimization

■ Lower energy costs due to greater efficiency

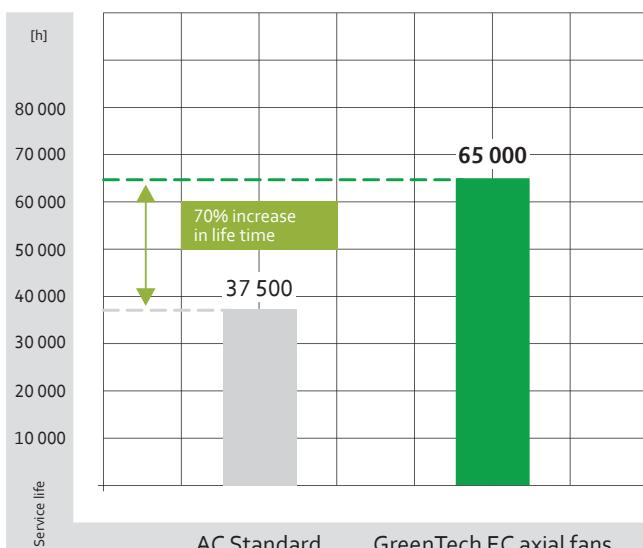

A drive concept based on state-of-the-art GreenTech EC technology with outstanding motor efficiency level. The energy consumption is up to 80 % lower than in AC fans of the same size. The energy savings alone mean that the products pay for themselves after only a few months. The savings made over the entire service life, especially in systems with multiple fans, are worth it.

■ Reduction in logistics costs as independent from line frequency and line voltage

The GreenTech EC axial compact fans are prepared for direct connection to all AC voltages and frequencies thanks to the "wide voltage capability" of the fan. A certain speed version can be operated worldwide, regardless of the 110 VAC or 230 VAC power supply. Voltage and frequency fluctuations during the power supply operation are compensated automatically. This reduces logistics costs and makes warehousing easier.

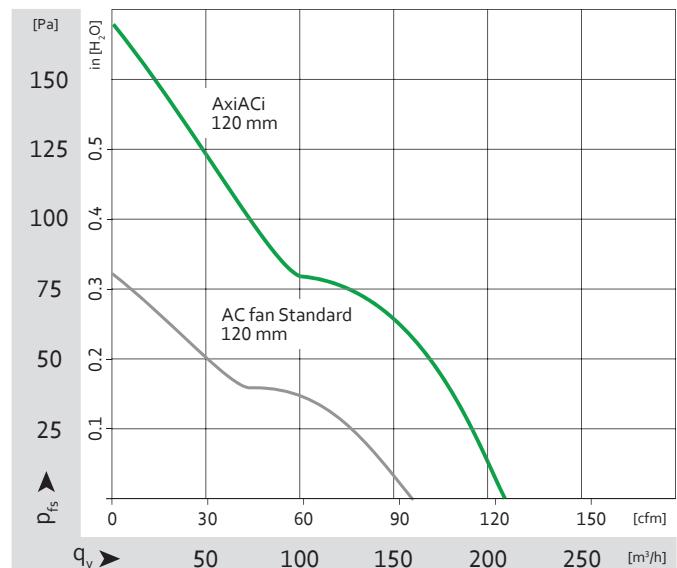

■ Long service life

The efficiency of GreenTech EC axial compact fans is up to 75% greater than that of conventional AC fans. This not only saves energy, it also means that the motor heats itself up less. The bearing system in particular responds positively to heating itself up less: the reason why the fans have a service life that is up to 70 % longer! This also extends the service and maintenance intervals significantly. Investments in replacement fans and downtimes, which are even more expensive, remain small enough to manage.

Higher performance

Unlike conventional AC technology, the state-of-the-art drive concept of this fan series is not linked to a fixed power frequency. This allows the motor speed to be increased over a wide range. This enables significantly higher air flow rates and significant pressure increases.

Flexibility and countless possible uses

- IP65 provides protection against harmful environmental influences and harsh operating conditions
- Natural refrigerant? No problem! Safety approvals according to DIN EN 60335-2-89, 60335-2-24, DIN EN 60079-7 enable use with natural, explosive refrigerants
- Everything is possible, from standby mode, overload mode at peak times or night reduction to temperature-controlled, quiet operation. From speed monitoring to long-term function monitoring via alarm or speed signal, the fans offer optional interfaces that allow easy and quick implementation of operational monitoring.
- Further information on these fan options can be found in the chapter "DC compact fan specials" on page 252.
- Or you can simply talk to our application engineers about the ideal GreenTech EC axial compact fan for you.

Material/Surface

- Housing: Metal
- Impeller: Plastic

Characteristics

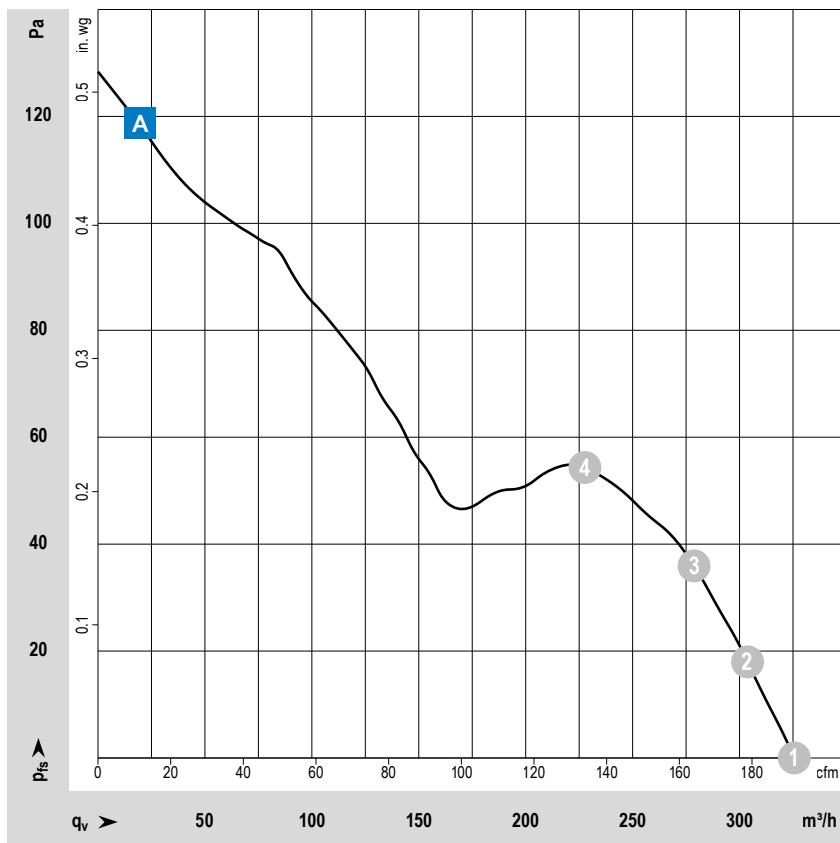

- Version: Efficient AC fan, suitable for use worldwide thanks to wide voltage
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup:
Via single wires AWG 22
- Electrical protection class: III
- Weight: 905 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA

Options

- Speed signal
- Go / NoGo alarm
- Alarm with speed limit
- External temperature sensor
- Internal temperature sensor
- PWM control input
- Analog control input
- Moisture protection
- Salt spray protection
- Degree of protection: IP65

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

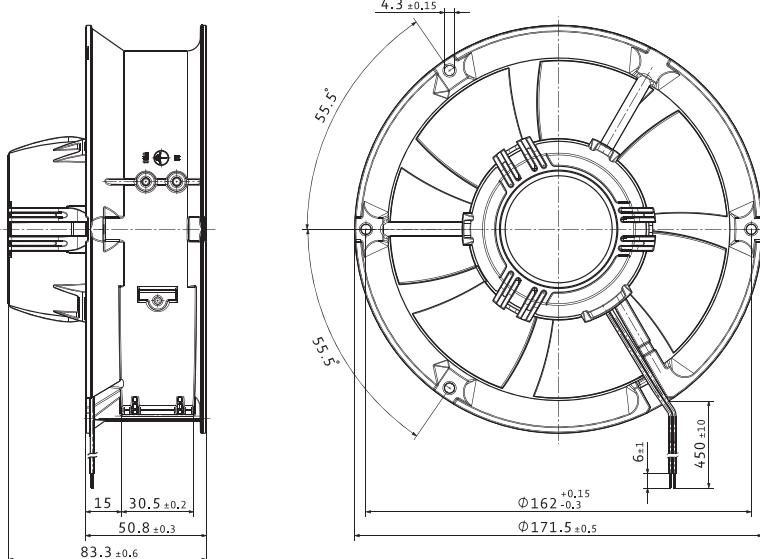

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation! For detailed information see <http://www.ebmpapst.com/general conditions>

Highest energy efficiency

- 0.03 - 0.045 W/m³/h free air (specific fan power)

Boost speed

- 2 speed settings possible via boost function

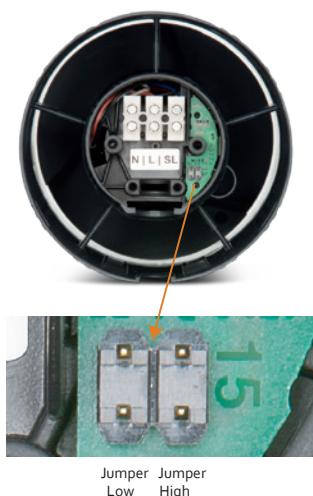

Vibration isolation

- Reduced transmission of vibrations from motor to housing

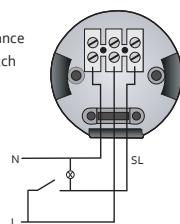

Intelligence

- Can be expanded to include set value requirement and signal outputs as an option

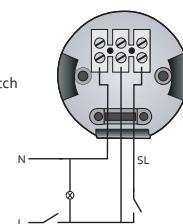

Examples of connections

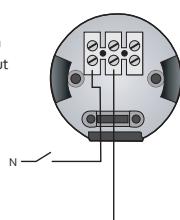

Example 1:
Nom speed endurance
Boost via light switch

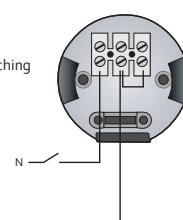

Example 2:
Nom speed via
light switch
Separate boost switch

Example 3:
Simple connection
Nom speed without
switching

Example 4:
Simple connection
Boost without switching

Scope of delivery

Product overview

AC axial fans

The tried-and-tested AC fans from ebm-papst are used wherever DC voltage is not available. In addition to complete devices, you will also find fans without external housing. These offer benefits whenever the air duct design can be integrated in the device that is being ventilated.

AC fans are available in many sizes, with variants with exhaust or intake over struts – with plug connection or exposed connection wires.

Fan drive using shaded-pole or capacitor motors based on the familiar external rotor principle. This construction combining high performance with profitability.

All fan types are designed in IP20 as standard. IP65 solutions and special protection types are available on request.

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see http://www.ebmpapst.com/general_conditions

Material/Surface

- Housing: Metal
- Impeller: Metal

Characteristics

- Version: Classic AC fan; compact and robust
- Direction of air flow: exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings or ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: Via 2 single wires; Grounding lug for M4 or 8-32 UNC
- Electrical protection class: I
- Weight: 490 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC

Options

- Moisture protection
- Salt spray protection
- Degree of protection: up to IP65

Note

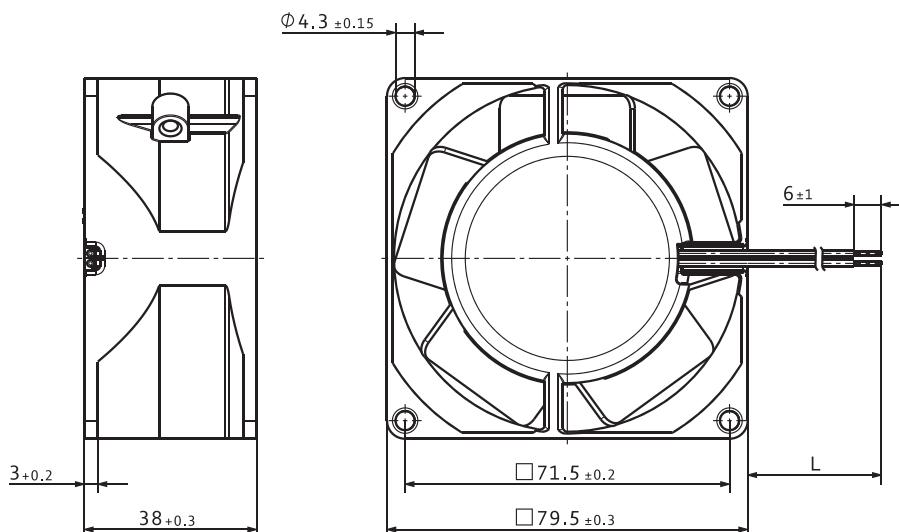

- Please note our series AC 8300. With identical mounting dimensions and voltages, this series achieves greater energy efficiency. See page 273

Subject to changes.

The air flow and sound level of fans without external housing depend on the installation conditions.
The stated air flow and noise have been measured with an orifice 76.5 mm Ø at a distance of approx. 17 mm from the mounting bracket.
The air flow capacity of fan series 8000 N is achievable because of the exceptionally favorable installation conditions.
The noise in the optimal operating range can be measured for these fans only in a specific application.

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound p_{wer} level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see <http://www.ebmpapst.com/general conditions>

Material/Surface

- Housing: Metal
- Impeller: Metal

Characteristics

- Version: Classic AC fan; compact and robust
- Direction of air flow: intake over struts; types 4890 N and 4840 N exhaust over struts
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings or ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: via 2 flat plugs 2.8 x 0.5 mm; Grounding lug for M4
- Electrical protection class: I
- Weight: 550 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC

Options

- Versions with reinforced mounting flanges and exposed external single wires
- Speed signal
- Moisture protection
- Salt spray protection
- Degree of protection: up to IP65

Note

- Please note our series AxiACi 120. With identical mounting dimensions and voltages, this series achieves greater energy efficiency. See page 280

Förderleistung und Geräusch von Lüftern ohne AußenHousing hängen von ihren Einbauverhältnissen ab.
Der genannte Air flow wurde in einer Lochblende von Ø 109 mm und einem Abstand von ca. 17 mm vom Mounting bracket ermittelt.
Bei besonders günstigen Einbauverhältnissen sind die Förderleistungen der Serie 4000 Z erreichbar.
Das Geräusch im optimalen Betriebsbereich kann für diese Lüfter nur im konkreten Anwendungsfall gemessen werden.

more at	www.ebmpapst.com

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see http://www.ebmpapst.com/general_conditions

Material/Surface

- Housing: Metal
- Impeller: Metal

Characteristics

- Version: Classic AC fan; compact and robust
- Direction of air flow: exhaust over struts
- Direction of rotation: counterclockwise, looking towards rotor
- Installation position: any
- Bearing: Ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: via 2 single wires, wire ends with wire end splices; Grounding lug for M4 x 8
- Electrical protection class: I (with customer connection to grounding conductor)
- Weight: 1.1 kg

Approvals

- EN 60335-1; CE; UKCA; VDE; UL 507; CSA 22.2 Nr. 113; EAC; CCC on request

Note

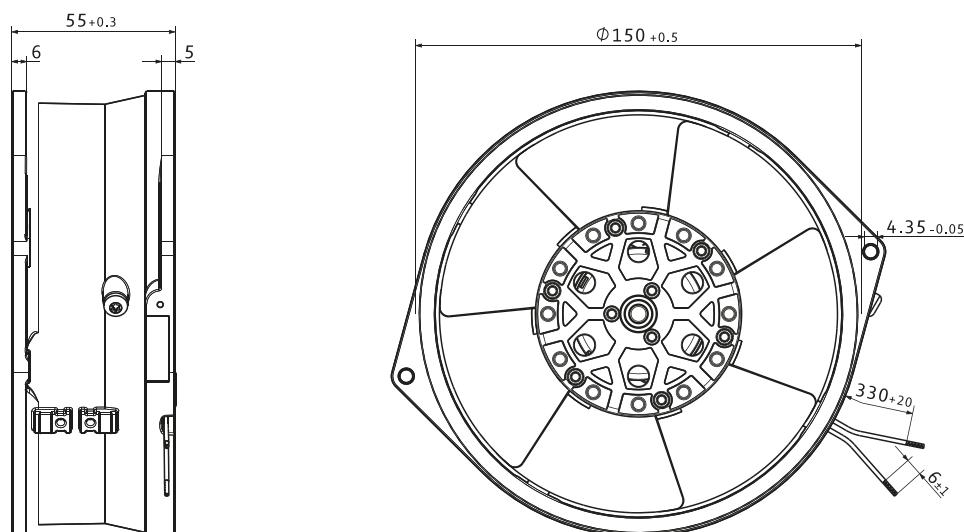

- Please note our series VWEH151. With identical mounting dimensions and voltages, this series achieves greater energy efficiency. See page 286

Product overview

AC centrifugal fans

The tried-and-tested AC fans from ebm-papst are used wherever DC voltage is not available. In addition to complete devices, you will also find fans without external housing. These offer economic benefits whenever the air duct design can be integrated in the device that is being ventilated.

AC centrifugal fans are available in many sizes with forward or backward-curved fan impeller. Depending on the installation situation, it is a pure fan impeller or is combined with a housing with optimized air flow and noise.

Fan drives through shaded-pole or capacitor motors usually incorporate the familiar external rotor principle. This design combines high performance with economic efficiency. ebm-papst also offers particularly flat AC fans with an internal rotor motor. The advantage of these is their fast start-up to full speed, resulting in lower mass moments of inertia.

All fan types are designed in IP20 as standard. IP54/IP68 solutions and special protection types are available on request.

Measuring conditions

Air performance measured according to: ISO 5801. Installation category A, without contact protection.

Noise: Total sound pressure level LWA ISO 10302 measured on a hemisphere with a radius of 2 m. Sound pressure level LpA measured at 1 m distance from fan axis. The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions. In the event of deviation from the standard configuration, the parameters must be checked after installation!

For detailed information see http://www.ebmpapst.com/general_conditions

Material/Surface

- Scroll housing: Plastic
- Impeller: Plastic
- Base plate: Metal

Characteristics

- Version: Classic AC fan in centrifugal design with housing and forward-curved impeller; compact and robust
- Direction of air flow: centrifugal; Discharge through window in housing
- Direction of rotation: clockwise, looking towards rotor
- Installation position: any
- Bearing: Sleeve bearings or ball bearings
- Operating mode: Continuous operation (S1)
- IP protection class: IP20
- Electrical hookup: via 2 single wires; Housing base with flat plugs 6.3 x 0.8 mm for ground conductor
- Electrical protection class: I
- Weight: 680 g

Approvals

- DIN EN 62368, UL507, CSA C22.2 Nr. 113, EAC, CE, UKCA, CCC

Options

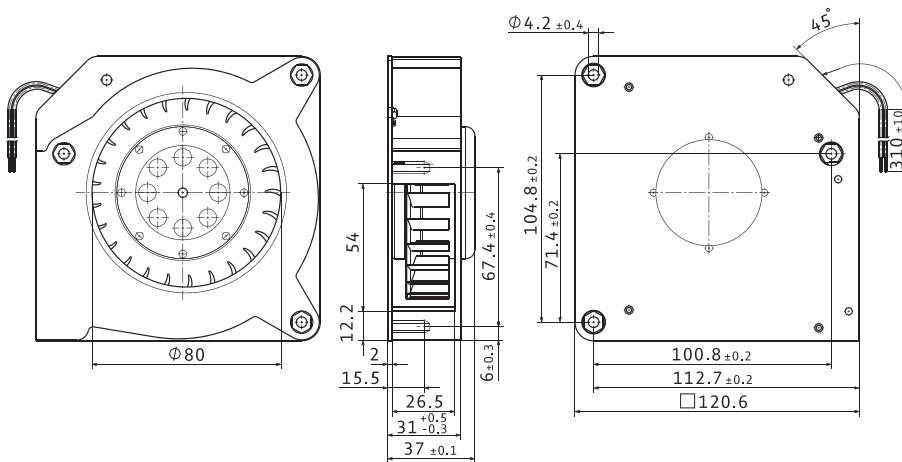

- Moisture protection
- Salt spray protection
- Degree of protection: up to IP54

ebm-papst

Accessories

ebm-papst offers a comprehensive selection of accessories for optimum fan operation, from temperature sensors for speed-controlled fans, to guard grills for all variants, to cables, filters, and screens, to spacers and installation parts. Even with very special accessories, you can be sure that we will assist you every way possible. The sales experts at ebm-papst will be happy to answer your questions about installing and using fans.

From selection to accessories:

Insist on the efficient and reliable service provided by ebm-papst.

Material

- Galvanized or nickel-plated steel wire

Note

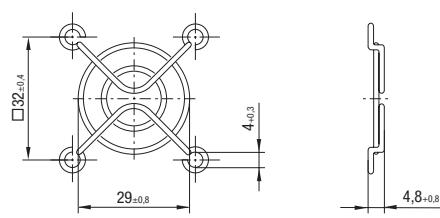

- Finger guard according to DIN EN ISO 13857 (previously EN 294).
- Additional finger guards that do not satisfy DIN EN ISO 13857 available on request.
- Our finger guards are designed specifically to be used with ebm-papst fans. They combine the highest degree of safety with minimum effect on the operating noise. Please note that the safety-related clearances cannot be guaranteed when finger guards made by other manufacturers are used.

Finger guards

ACmaxx / ACi

Material

- Galvanized or nickel-plated steel wire

Note

- Finger guard according to DIN EN ISO 13857 (previously EN 294).
- Finger guards for air outlet described on this page are specifically for fan series ACmaxx.
- For air intake side the standard finger guards with a corresponding dimension can be used.

Filter fan guards

More at

www.ebmpapst.com

Material

- Guard cover: Injection-molded polycarbonate (PC) with mat surface.
- Mounting plate: wire mesh with black powder coating
- Filter pad: white, synthetically bonded fibers

Note

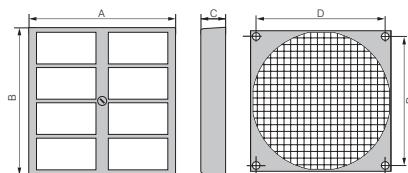

- Filter fan guards suitable for fitting on axial fan series in sizes: 60 mm, 80 mm, 92 mm, 119 mm, Ø 172 mm.
- All filter units fit directly on the existing mounting holes of the fans.
- Filter fan guards consisting of 3 parts: external guard cover, internal mounting plate, and replaceable filter pad.
- The filter pad can be replaced quickly and easily via a quick release on the guard cover.
- The filter pads can be replaced even while the fan is running, as protection is provided by the welded wire mesh.

Fan size: 60 x 60 mm / 80 x 80 mm

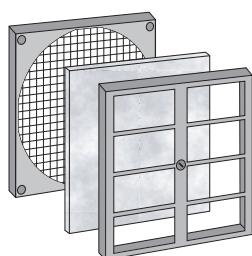

FF92 / FF 119

Fan size: 92 x 92 mm / 119 x 119 mm

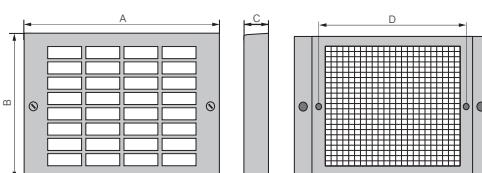

Filter performance

The filter fan guard filters 75 % of dust particles with a size of 5-10 microns and can withstand temperatures of up to 100 °C. Filter class G3 according to DIN EN 779. Flame-retardant according to DIN 53438, class F1. When a clean filter is installed, a reduction of air flow of 20-30 % is possible.

FF 172

Fan size: Ø 172 mm

Finger guards

For compact centrifugal modules

Material

- PA plastic, fiberglass-reinforced

Highlights

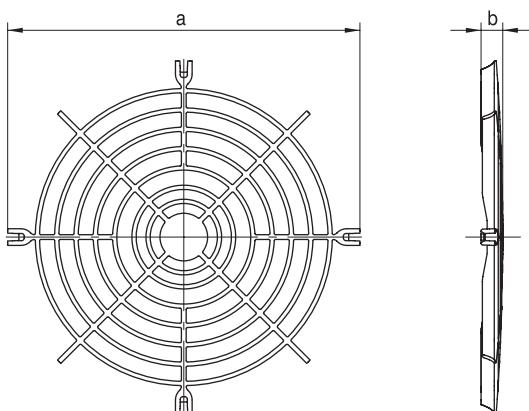

- Flame protection class in line with UL 94V-0

Air inlet grill

Material

- PA plastic, fiberglass-reinforced

Highlights

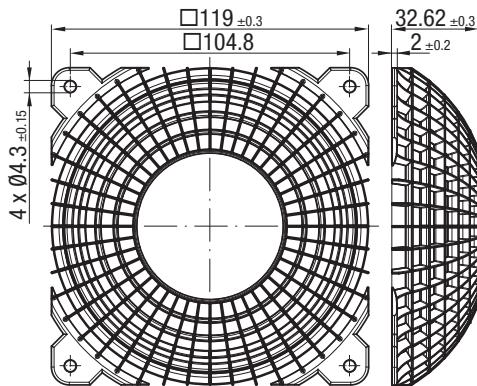

- For axial and diagonal fans
- Assembled on the air intake, the fan grid reduces the noise emission dramatically and minimizes disturbing low frequency sound.

Cables for energy-saving motors 115/230 VAC

Part number	a
13060-4-1040	450
13061-4-1040	1 500

Subject to changes. Dimensions in mm.

Characteristics

- Easy speed programming
- Battery operated
- User-friendly navigation menu
- Protective cover with folding stand

For Energy Saving Motor (ESM) based products

Part number
CBC 000-AF08-01

Subject to changes. Dimensions in mm.

Makes quick work of programming the two ESM adjustable operating speeds. Eliminates the need for a PC, software adapter and second cable. Especially for use in production or by sales representatives. Automatic shut-off function for extended battery life. Mini USB plug for downloading software updates. Batteries, programming cable, and operating instructions included in scope of delivery.

Accessories

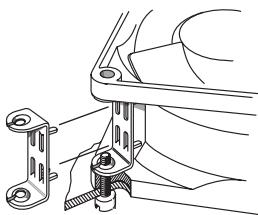

In addition to the accessories and installation parts listed here, ebm-papst also supplies a number of additional, sometimes very special parts for fans.

Our company sales team is happy to offer you their expert assistance with all your questions regarding the installation and use of our fans.

LZ212

Screw clip of rustproof spring steel.
For mounting fans with threaded pin
3.5 DIN EN ISO 1478 (7970).

LZ261

Spacer of fiberglass-reinforced plastic.
For mounting with screws through both
fan mounting flanges.

LZ210

Screw clip of hardened steel.
For mounting fans with threaded pin
6-32 UNC or 3.5 DIN 7970.

LZ370

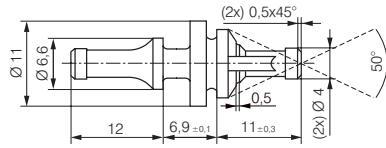

Required performance data

R₂₅ = 100 KΩ ±5% @25°C
B-value = 4190 ±2%
P_{max} = 0.25 W

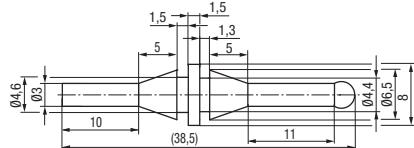

Temperature sensor for speed-controlled
fan operation.
Temperature range 30...50 °C.

LZ550

Rubber anti-vibration mounts for fans with
a hole diameter of 4.3 ±0.2 mm and flange
thickness of 3 to 5.5 mm. For a carrier plate
with a hole diameter of 6.5 ±0.15 mm and
plate thickness of 1 to 2 mm.

LZ551

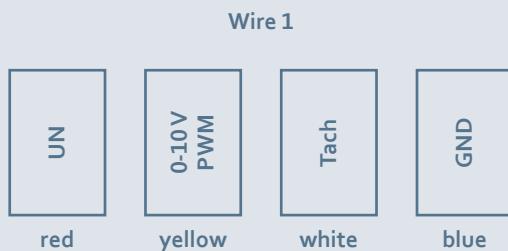

Rubber anti-vibration mounts for fans with
a hole diameter of 4.3 ±0.2 mm and flange
thickness of 2 to 4 mm. For a carrier plate
with a hole diameter of 4.4 ±0.15 mm and
plate thickness of 1 to 2 mm.

Wire	Designation	Color	Assignment/function
1	UN +24 VDC	red	Power supply 24/48 VDC, supply voltage ripple ± 3.5 %
	1-10V /PWM	yellow	Control input Re > 100 K
	Tach	white	Tach output: 2 pulses / revolution (M1G045/M1G055) 3 pulses / revolution (M1G074/M1G084)
	GND	blue	Reference ground

Connection diagrams EC H3)

Technical features (M3G 055 with 2 speed stages):

- Speed setting input (230V)
- Power limitation
- Motor current limitation
- Soft start
- Thermal overload protection for electronics / motor
- Line undervoltage detection

Wire	Designation	Color	Assignment/function
1	L	black	Power supply 230 VAC, 50 - 60 Hz, see type plate for voltage range
	N	blue	Neutral conductor
	PE	green/yellow	Ground conductor
	SL	brown	Speed selection: switch open = speed 1; switch closed = speed 2

Connection diagrams EC H4)

Technical features (M3G 055 speed-controlled):

- Output 10 VDC max. 1.1 mA
- Tach output
- Power limitation
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Control interface with SELV potential safely disconnected from the mains
- Overvoltage detection
- Thermal overload protection for electronics / motor
- Line undervoltage detection

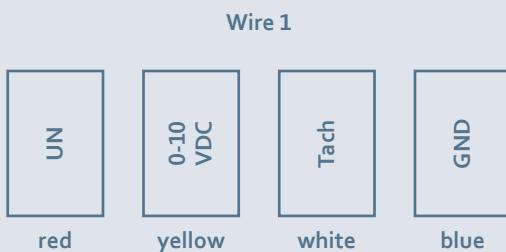

Wire	Designation	Color	Assignment/function
1	L	black	Power supply 115/230 VAC, 50 - 60 Hz, see type plate for voltage range
	N	blue	Neutral conductor
	PE	green/yellow	Ground conductor
2	GND	blue	GND - Connection for control interface
	0-10V PWM	yellow	Control input 0-10 V or PWM, electrically isolated
	10V/max. 1.1 mA	red	Voltage output +10V / 1.1 mA, electrically isolated, not short-circuit-proof
	Tach	white	Tach output: Open collector, 1 pulse per revolution, electrically isolated

Connection diagrams EC J5)

Technical features (nominal voltage 24 / 48 VDC):

- Control input 0-10 VDC / PWM
- Output 10 VDC max. 1.1 mA
- Power limitation
- Soft start
- Motor current limitation
- Tach output
- Thermal overload protection for electronics / motor
- Overvoltage detection
- Line undervoltage detection
- Control interface with SELV potential safely disconnected from the mains

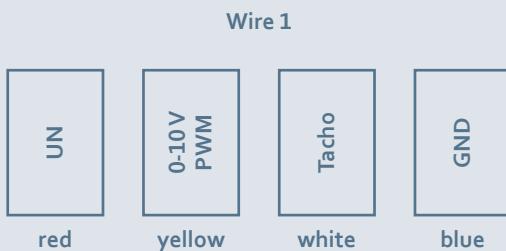

Wire	Designation	Color	Assignment/function
1	UN +24/48 VDC	red	Power supply 24/48 VDC, supply voltage ripple $\pm 3.5\%$
	0-10 VDC	yellow	Control input Re $>100\text{ K}$
	Tach	white	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	blue	Reference ground

Connection diagrams EC Q)

Technical features:

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10VDC / PWM
- Overvoltage detection
- Thermal overload protection for electronics
- Reverse polarity protection

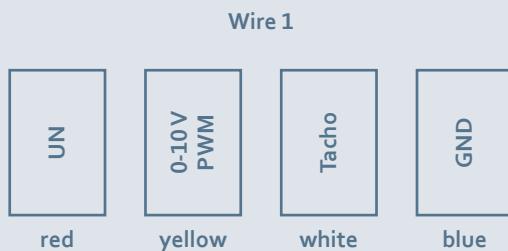

Wire	Designation	Color	Assignment/function
1	UN +12/24 VDC	red	Power supply 12/24 VDC, supply voltage ripple $\pm 3.5\%$
	PWM/LIN	yellow	Control input Re > 40 K
	Tach	white	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	blue	Reference ground

Connection diagrams EC R)

Technical features:

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10VDC / PWM
- Overvoltage detection
- Thermal overload protection for electronics
- Reverse polarity protection

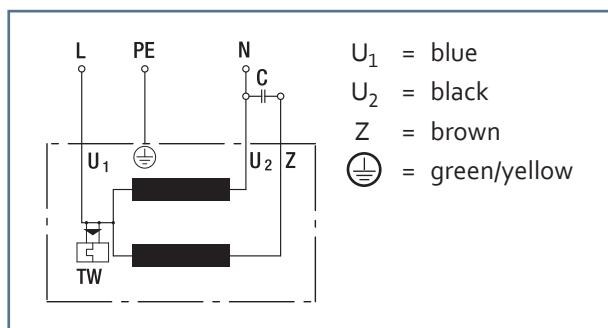

Wire	Designation	Color	Assignment/function
1	UN +48 VDC	red	Power supply 48VDC, supply voltage ripple $\pm 3.5\%$
	0-10V /PWM	yellow	Control input Re > 100 K
	Tacho	white	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	blue	Reference ground

Connection diagrams AC A1) / A3) / C2)

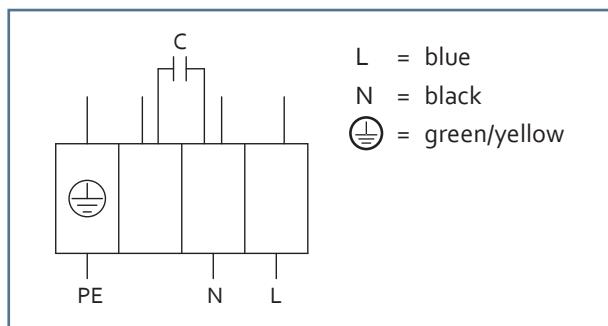

A1) Single-phase capacitor motor (1~ 115/230 VAC power line)

with thermal overload protector wired internally

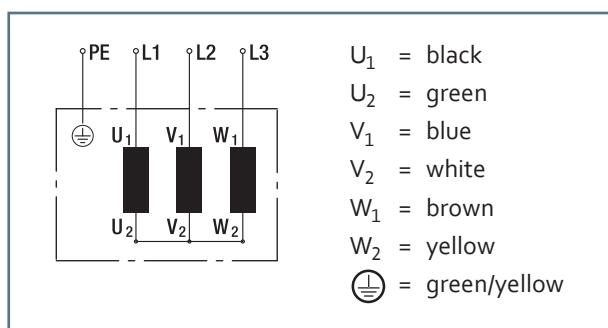

A3) Single-phase capacitor motor (1~ 115/230 VAC power line)

with thermal overload protector wired internally

C2) Star connection (3~ 400 VAC power line)

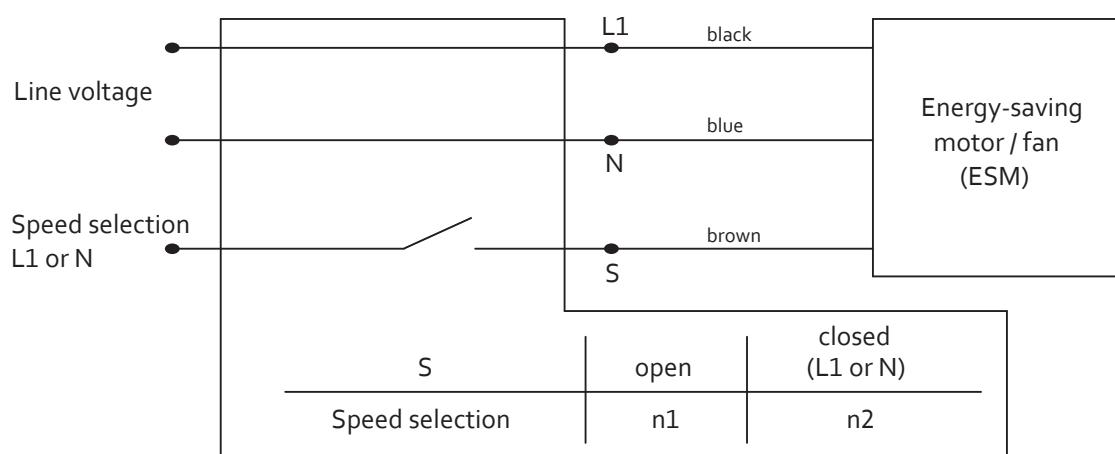

without thermal overload protector

Connection diagrams AC

J7)

J7) Energy-saving motor (ESM) (1~ 115/230 VAC power line)

Notes

Compact fans for AC, DC and EC
